Chapter 1

Psychological Testing and Assessment

- The use of testing to denote everything from test administration to test interpretation can be found in postwar textbooks as well as in various test-related writings for decades thereafter. However, by **World War II** a semantic distinction between testing and a more inclusive term, assessment, began to emerge.
- We define **psychological assessment** as the gathering and integration of psychology - related data for the purpose of making a psychological evaluation that is accomplished through the use of tools such as tests, interviews, case studies, behavioral observation, and specially designed apparatuses and measurement procedures.
- We define **psychological testing** as the process of measuring psychology-related variables by means of devices or procedures designed to obtain a sample of behavior.

The process of assessment

- In general, the process of assessment begins with a referral for assessment from a source such as a teacher, a school psychologist, a counselor, a judge, a clinician, or a corporate human resources specialist.
 - Some examples of referral questions are: "Can this child function in a regular classroom?"; "Is this defendant competent to stand trial?"; and "How well can this employee be expected to perform if promoted to an executive position?"
