Satellite Sar Detection Of Sub-mesoscale Ocean Dynamic Processes Quanan Zheng,2017-03-17 Synthetic aperture radar SAR as a form of radar to create images of objects uses the motion of the radar antenna over a targeted region to provide finer spatial resolution than is possible with conventional beam scanning radars by mounting the antenna on a moving platform such as an aircraft or spacecraft As antenna aperture the size of the antenna is defined by the distance the SAR device travels over a target in the time taken for the radar pulses to return to the antenna the larger the aperture is the higher the image resolution therefore this enables SAR to create high resolution images with comparatively small physical antennas This special book aims to provide the updated theories and methods for the use of synthetic aperture radar SAR onboard satellites to detect ocean processes i e SAR ocean remote sensing It is a hi tech application field having been developed since late 1970s and become a powerful tool for obtaining dynamic signatures from the remote and broad ocean
