Spatial Database Systems Albert K.W. Yeung, G. Brent Hall, 2007-05-23 The decision to write this book was motivated by a number of factors First although several useful textbooks on spatial databases have recently been published this is an area of spatial information science that has lagged somewhat behind the rapid advances of the technology and the profusion of books on domain specific applications Second much of the information pertaining to spatial database technologies is only available in scattered journal papers and conference proceedings and prior to this book no single effort has been made to sift through this expansive literature and unite the key contributions in a single volume The tasks of sourcing and coherently integrating relevant contributions is daunting for students many of whom have a substantial number of competing demands placed on them This book should make the task of knowledge building less daunting Third and perhaps most importantly an apparent trend in many spatial information science programs is to focus from first or second year undergraduate through to fourth year courses on learning to work confidently and independently with increasingly complex software tools Hence many courses are technical in nature and while they continue to produce technically adept students knowledge of the broader aspects of spatial databases is often not as complete as it might be among graduates Some programs have sought to address this by introducing courses that focus on spatial data management However these courses are largely unsupported by a relevant and contemporary textbook

Geographic Hypermedia Emmanuel Stefanakis,Michael P Peterson,Costas Armenakis,Vasilis Delis,2007-01-04 This book introduces a new paradigm Geographic Hypermedia which emerges from the convergence of Geographic Information Science and permedia technology Both GI Science and hypermedia have been rapidly evolving fields The initial idea of Geographic Hypermedia was born in 2004 when the editors had been invited to organize a workshop in conjunction with the Hypertext conference organized annually by the Special Interest Group of the Association for Computing Machinery The purpose of the workshop was to examine how hypermedia concepts and tools may be applied in geographical domains The workshop was eventually held in conjunction with the Maps and the Internet Commission of the International Cartographic Association at the annual meeting of the Association of American Geographers in Denver Colorado in April 2005 The Denver workshop was a successful event bringing together multidisciplinary researchers and professionals in the area of Geographic

permedia Researchers from four continents and well recognized institutions presented their work and exchanged opinions about the new paradigm its content and distinct characteristics from other paradigms Extended versions of the papers presented at the workshop along with some invited chapters from experts in the field led to the compendium of the twenty five chapters in this book volume Geographic Hypermedia is not yet a mature paradigm but we aspire to provide the scientific community with a contemporary view of Geographic Hypermedia present an overview of its progress and current status while also promoting further discussion and research *Encyclopedia of GIS* Shashi Shekhar, Hui Xiong, 2007-12-12

The Encyclopedia of GIS provides a comprehensive and authoritative guide contributed by experts and peer reviewed for accuracy and alphabetically arranged for convenient access The entries explain key software and processes used by geographers and computational scientists Major overviews are provided for nearly 200 topics Geoinformatics Spatial Cognition and Location Based Services and more Shorter entries define specific terms and concepts The reference will be published as a print volume with abundant black and white art and simultaneously as an XML online reference with hyperlinked citations cross references four color art links to web based maps and other interactive features *Encyclopedia of Geographic Information Science* Karen Kemp, 2007-12-26

Most of the topics in this encyclopedia will remain important for years to come Many of the topics here are germane to geography such as the Modifiable Areal Unit Problem spatial autocorrelation mental maps and scale For these reasons as well as for its sheer readability and usefulness I believe that this book will serve as a practical reference for geography and GIS educators practitioners and university students long into the future It is not a reference for taking up space on the shelf but one for the top of the desk to be referred to often Dr Joseph J Kerski ESRI Education Manager Geographic information science GIScience is an emerging field that combines aspects of many different disciplines Spatial literacy is rapidly becoming recognized as a new essential pillar of basic education alongside grammatical logical and mathematical literacy By incorporating location as an essential but often overlooked characteristic of what we seek to understand in the natural and built environment geographic information science GIScience and systems GISystems provide the conceptual foundation and tools to explore this new frontier The Encyclopedia of Geographic Information Science covers the essence of this exciting new and expanding field in an easily understood but richly detailed style In addition to contributions from some of the best recognized scholars in GIScience this volume contains contributions from experts in GIS supporting disciplines who explore how their disciplinary perspectives are expanded within the context of GIScience what changes when consideration of location is added what complexities in analytical procedures are added when we consider objects in 2 3 or even 4 dimensions what can we gain by visualizing our analytical results on a map or 3D display Key Features Brings together GIScience literature that is spread widely across the academic spectrum Offers details about the key foundations of GIScience no matter what their disciplinary origins Elucidates vocabulary that is an amalgam of all of these fields Key Themes Conceptual Foundations Cartography and Visualization Design Aspects Data Manipulation
