

A large, light-colored wireframe sphere is centered on the left side of the cover. It is composed of many thin lines forming a grid of latitude and longitude, giving it a three-dimensional appearance. The background is a solid red color with a subtle, darker red geometric pattern on the right side.

reactions are studied under the constraints of constant temperature and constant pressure biochemical reactions are studied under the additional constraints of pH and perhaps pMg or free concentrations of other metal ions As more intensive variables are specified more thermodynamic properties of a system are defined and the equations that represent thermodynamic properties as a function of independent variables become more complicated This sequel to Robert Alberty's popular *Thermodynamics of Biochemical Reactions* describes how researchers will find Mathematica a simple and elegant tool which makes it possible to perform complex calculations that would previously have been impractical *Biochemical Thermodynamics Applications of Mathematica* provides a comprehensive and rigorous treatment of biochemical thermodynamics using Mathematica to practically resolve thermodynamic issues Topics covered include Thermodynamics of the dissociation of weak acids Apparent equilibrium constants Biochemical reactions at specified temperatures and various pHs Uses of matrices in biochemical thermodynamics Oxidoreductase transferase hydrolase and lyase reactions Reactions at 298.15 K Thermodynamics of the binding of ligands by proteins Calorimetry of biochemical reactions Because Mathematica allows the intermingling of text and calculations this book has been written in Mathematica and includes a CD ROM containing the entire book along with macros that help scientists and engineers solve their particular problems *Solutions Manual, Physical Chemistry* Robert A. simplified view of a topic and evolves to more rigorous description in order to provide the student and instructor flexibility to choose the level of rigor and detail that suits them best The textbook treats important new directions in physical chemistry research including chapters on macromolecules principles of interfaces and films for organizing matter and supramolecular machines as well as including discussions of modern nanoscience spectroscopy and reaction dynamics throughout the text
