

## Physical Science 101 - Kinematically Weighting

### Proposed:

We want your input on the principle that we propose to use in a new weighting system.

### Background:

Because of the nature of the data, we have to use a weighting system that is not a simple average. We have to use a weighting system that is not a simple average.

### Proposed:

#### 1. The data is a set of three values:

A, B, and C, where A, B, and C are all positive.

Then we have:

We will calculate the weighted average of A, B, and C, where the weights are the values of A, B, and C.

2. The weighted average of A, B, and C is calculated by taking the sum of A times B, B times C, and C times A, and dividing that sum by the sum of A, B, and C. This gives us the weighted average of A, B, and C.

$$\% \text{ difference} = \frac{\text{actual value} - \text{calculated value}}{\text{actual value}}$$

#### 3. The proposed average for the percent differences is calculated as follows:

4. Using the data, we calculate the weighted average of the percent differences. This gives us the weighted average of the percent differences.

5. We calculate the weighted average of the percent differences. This gives us the weighted average of the percent differences.
