

**Protein Synthesis Simulation Lab****Part I: Introduction**

DNA is a very long, thin molecule located in the nucleus. The DNA in one chromosome has 10x of millions of base pairs and hundreds or thousands of genes. Yet an individual cell will only use a small portion of those genes in its lifetime. Imagine a mechanic who spends a lifetime fixing nothing but cars, but he or she is required nonetheless to carry around an entire library of repair manuals for everything from kitchen sinks to washing machines to light fixtures to computers and so on – all information the mechanic will never be able to use because s/he's busy fixing cars.

Another peculiar thing about DNA is that it is located inside the nucleus, and pretty much stays inside the nucleus, yet the proteins that DNA helps to make are produced OUTSIDE of the nucleus. So how does the cell solve this problem? It sends a "messenger" from the nucleus to the ribosomes in the cytoplasm.

In a process called transcription, the DNA code is transcribed (copied) into mRNA, following rules similar to DNA replication we saw earlier (see below). mRNA moves out of the nucleus into the cytoplasm where it links up with ribosomes and begins churning out proteins.

Recall that DNA consists of a sugar-phosphate backbone with a nitrogenous base. There are 4 different bases in DNA abbreviated with the letters A, T, C, & G. The code contained in DNA derives from these 4 bases. We can think of them as letters in an alphabet that will spell different words. In a real language, words can be anywhere from 1 letter long (a, I) to an upper limit of 10-15 letters for functional, non-compound words.

In DNA code, a "word" is always 3 letters long and is called a "codon." Consider the following DNA segment:

A	T	C	G	T	C	C	A	A	A	
T	A	G	C	A	G	G	T	T	T	

"ATC" is a codon. "GTC" is a codon. "CAA" is a codon. Etc.

In transcription, the DNA code is transcribed (copied) into RNA code, following rules similar to DNA replication we saw earlier EXCEPT that:

DNA	RNA
<i>Matches with</i>	
A.....	U
T.....	A
C.....	G
G.....	C

1. Transcribe the following DNA sequence into mRNA. Draw a line separating each codon:

A	T	C	G	T	C	C	A	A	A	....
U	A	G	C	A	G	G	U	U	U	....

*4th Biotechnology and Bioinformatics Symposium* ,2007      **Teaching to Learn** Kenneth George Tobin,2006 A recurrent trope in education is the gap that exists between theory taught at the university and praxis what teachers do in classrooms How might one bridge this inevitable gap if new teachers are asked to learn to talk about teaching rather than to teach In response to this challenging question the two authors of this book have developed coteaching and cogenerative dialoguing two forms of praxis that allow very different stakeholders to teach and subsequently to reflect together about their teaching The authors have developed these forms of praxis not by theorizing and then implementing them but by working at the elbow of new and experienced teachers students supervisors and department heads Coteaching which occurs when two or more teachers teach together supports learning to teach while improving student achievement Cogenerative dialogues are conversations among all those who have been present in a lesson they ensure that what was learned while coteaching is beneficial for all coteachers and learners Tobin and Roth describe the many ways coteaching and cogenerative dialogues are used to improve learning environments dramatically improving teaching and learning across cultural borders defined by race ethnicity gender and language Teaching to Learn is written for science educators and teacher educators along the professional continuum new and practicing teachers graduate students professors researchers curriculum developers evaluation consultants science supervisors school administrators and policy makers Thick ethnographic descriptions and specific suggestions provide readers access to resources to get started and continue their journeys along a variety of professional trajectories      *Modeling and Simulation* ,1979      **Modeling, Methodologies and Tools for Molecular and Nano-scale Communications** Junichi Suzuki,Tadashi Nakano,Michael John Moore,2017-03-15 This book reports on cutting edge modeling techniques methodologies and tools used to understand design and engineer nanoscale communication systems such as molecular communication systems Moreover it includes introductory materials for those who are new to the field The book s interdisciplinary approach which merges perspectives in computer science the biological sciences and nanotechnology will appeal to graduate students and researchers in these three areas The book is organized into five parts the first of which describes the fundamentals of molecular communication including basic concepts models and designs In turn the second part examines specific types of molecular communication found in biological systems such as neuronal communication in the brain The book continues by exploring further types of nanoscale communication such as fluorescence resonance energy transfer and electromagnetic based nanoscale communication in the third part and by describing nanomaterials and structures for practical applications in the fourth Lastly the book presents nanomedical applications such as targeted drug delivery and biomolecular sensing      Plant-Based Nanoparticle Synthesis for Sustainable Agriculture Ranjit Pabbati,Kalyani Chepuri,Kondakindi Venkateswar Reddy,Naga Raju Maddela,2025-03-13 The use of nanotechnology in agriculture has created many concerns related to toxicity and environmental implications Green synthesis techniques for
