Psychiatric Case Study of a Person with Gender Dysphoria

Psychiatric History

Identification. The patient, R. S., sought consult on 16 September 2014 at the Ateneo de Manila University. She was born on 18 January 1992 (22 years old), to parents R. M. S. and A. J. S., in Quezon City, Philippines. She was assigned the sex male at birth, but currently identifies as a female, making her transgender. She currently lives with her parents and two siblings in Quezon City.

Chief Complaint. Patient: "I never really felt like a boy. I always felt like a girl."

History of Present Illness. The patient reported that she always felt like a female and never a male. She has experienced different kinds of transphobic discrimination (discrimination due to one's identification as transgender) throughout her life. However, she also reported that she never had to come out of the family, because she said, "They just knew," meaning her loved ones simply know that she identifies as a female. She reported taking anti-androgen medication on her own, but later on discontinued use because it was not necessary, because she felt beautiful as a woman already.

Past Psychiatric History. The patient reported no past psychiatric episodes nor symptoms.

Medical History. No major illnesses nor medical conditions were reported.

Family History. The patient reported no psychiatric illnesses within her family. She has two siblings; she is the middle child. She is not close with her older brother, but she mainly interacts with her younger sister. Her parents are currently not on speaking terms, but she does not know why. Despite this, she says that such a system in her family works for the household.
