

organisations. It should be clear and practical in its formulations, especially those pertaining to involuntary hospitalisation. It should take into account the availability of in-patient and out-patient facilities and fit with existing resources to facilitate its acceptance and implementation. The rights of hospitalised patients should be reviewed to better protect them from abuse. Voluntary admission should be encouraged and the length of involuntary hospitalisation shortened. Review by judicial authorities of compulsory orders should be done earlier and more frequently, and patients themselves should have the right to appeal against the imposition of involuntary measures.

For the time being and in the short term at least, the country has enough resources (human and financial) to move towards a modern, humane and respectful mental healthcare system.

SPECIAL PAPER

The impact factor and psychiatry journals: an international perspective

Sundararajan Rajagopal

Consultant Psychiatrist, Chennai, India, email: rajagopal@pharmail.com

The impact factor (IF) is a metric for assessing academic journals. Despite its shortcomings, the IF is the preeminent yardstick by which the quality of scientific journals is determined. In this paper, the key aspects of the IF are covered from an international perspective, with a specific emphasis on psychiatry journals.

The concept of the impact factor (IF) was introduced by Eugene Garfield, an American linguist, in 1955 (Garfield, 1955). It was originally suggested as a measure that could help librarians decide which journals they should subscribe to. Over the years, its importance has grown exponentially, to the point that the IF is today, by far, the foremost criterion by which a scientific journal's standing is evaluated. Furthermore, the IF can significantly boost the subscription and advertising revenues of a journal.

In addition, for researchers, getting papers published in high-IF journals can considerably enhance career progression and increase the likelihood of research grants being awarded. The maxim 'publish or perish' is well known in academic circles, and that applies particularly to publishing in high-IF journals.

Definition of IF

The IF of a journal is calculated each year. The IF of journal J for year Y is the number of citations in year Y of all articles published in journal J in years Y–1 and Y–2 (i.e. the two preceding years), divided by the total number of articles in journal J in years Y–1 and Y–2.

For example, say that journal J published 100 articles in 2010 and 100 articles in 2011, and that these articles were cited 450 times in other articles in various journals (including journal J) in 2012. The IF of journal J for the year 2012 will be 450 divided by 200 (100 + 100), which is 2.25.

The IF is calculated based on the Journal Citation Reports (JCR) published by Clarivate Analytics (integrated with its Web of Science product, previously owned by Thomson Reuters and formerly known as ISI Web of Knowledge).

General medicine journals and psychiatry journals with the highest IFs

The five general medicine journals with the highest IFs in 2014 were:

- *New England Journal of Medicine*, IF = 55.8
- *Lancet*, IF = 45.2
- *JAMA*, IF = 35.3
