Investigating the Stanford Prison Experiment Thibault Le

Texier,2024-08-08 In 1971 psychologist Philip Zimbardo ran the now famous Stanford prison experiment to show that prison could make normal people behave in pathological ways Based on the first thorough investigation in the archives of the experiment and on interviews with about half of its participants this book shows that the Stanford prison experiment is far from being scientific In particular the guards knew what results were expected from them they were trained and supervised by the experimenters and they were following a schedule and a set of rules written by the experimenters The experimenters deceived the guards and made them believe they were not subjects They also borrowed many elements from a previous student experiment without disclosing this information in their reports The prisoners were not allowed to leave the experiment at will and they were conditioned by the experimenters The mock prison situation was unrealistic Most participants did not forget they were participating in an experiment and many responded to demand characteristics The data was not collected properly And the conclusions were pre written according to non academic aims This book goes beyond the experiment to provide ample background and context in order to understand how the experiment was planned financed recorded and divulged in the press and within the academic It discusses also the role played by Philip Zimbardo in the trial of one of the guards of Abu Ghraib as well as the impact of mass media on science the debates between personal psychology and social psychology and the specific nature of cold war social science

Questioning Causality Rom Harré,Fathali M.

Moghaddam,2016-01-25 Covering a topic applicable to fields ranging from education to health care to psychology this book provides a broad critical analysis of the assumptions that researchers and practitioners have about causation and explains how readers can improve their thinking about causation In virtually every laboratory research center or classroom focused on the social or physical sciences today the concept of causation is a core issue to be questioned tested and determined Even debates in unrelated areas such as biology law and philosophy often focus on causality What made that happen In this book experts from across disciplines adopt a reader friendly approach to reconsider this age old question in a modern light defining different kinds of causation and examining how causes and consequences are framed and approached in a particular field Each chapter uses applied examples to illustrate key points in an accessible manner The contributors to this work supply a coherent critical analysis of the assumptions researchers and practitioners hold about causation and explain how such thinking about causation can be improved Collectively the coverage is broad providing readers with a fuller picture of research in social contexts Beyond providing insightful description and thought provoking questioning of causation in different research areas the book applies analysis of data in order to point the way to smarter more efficient practices

Consequently both practitioners and researchers will benefit from this book In the Know Russell T. Warne,2020-10-29

Tupper, Keith D. Cicerone, 1990-12-31 For a period of some fifteen years following completion of my internship training in clinical psychology 1950-1951 at the Washington University School of Medicine and my concurrent successful navigation through that school's neuroanatomy course clinical work in neuropsychology for me and the psychologists of my generation consisted almost exclusively of our trying to help our physician colleagues differentiate patients with neurologic disorders from those with psychiatric disorders In time experience led all of us from the several disciplines involved in this enterprise to the conclusion that the crude diagnostic techniques available to us circa 1945-1965 had garnered little valid information on which to base such complex differential diagnostic decisions It now is gratifying to look back and review the remarkable progress that has occurred in the field of clinical neuropsychology in the four decades since I was a graduate student In the late 1940s such pioneers as Ward Halstead Alexander Luria George Yacorzynski Hans Lukas Teuber and Arthur Benton already were involved in clinical studies that by the late 1960s would markedly have improved the quality of clinical practice However the only psychological tests that the clinical psychologist of my immediate post Second World War generation had as aids for the diagnosis of neurologically based conditions involving cognitive deficit were such old standbys as the Wechsler Bellevue Rorschach Draw A Person Bender Gestalt and Graham Kendall Memory for Designs Test **Holistic Treatment in Mental Health** Cheryl L. Fracasso, Stanley Krippner, Harris L. Friedman, 2020-09-23 The first of its kind this guidebook provides an overview of clinical holistic interventions for mental health practitioners Submissions from 21 contributors examine the validity of different methods and provide information on credentialed training and licensure requirements necessary for legal and ethical practice Chapters covering a range of healing modalities describe the populations and disorders for which the intervention is most effective as well as the risks involved and present research on the effectiveness of treatment with step by step sample
