User's Guide to the Meade LXD55 and LXD75 Telescopes Martin Peston,2010-04-28 I have owned telescopes for over 25 years since I was a young lad I purchased an LXD55 AR 6 Refractor in 2002 and was one of the first to own one in the UK I am also a proud owner of an LXD75 SC 8 Armed with these two very different telescopes I have spent many hours searching the skies for interesting objects using Meade s Autostar Goto facility My motivation to write a book about the LXD Goto telescope series first came from comments about an LXD55 AR 6 Refractor review that was published on the LXD55 com website From then on I have had regular emails from people asking technical questions about the telescope and which model is best suited for them Whilst attending Star parties in the UK I found that many LXD owners would struggle to use them even at a basic level especially if they have never owned or used an equatorially mounted Goto telescope before Since the first LXD55 models came out in early 2002 owners have struggled to find useful information to help them use the telescopes to the best advantage There have been mixed reactions about its quality and performance Hence this book is directed towards those who are new to Goto and the LXD telescope **Manual of Astronomy** Robert William Shaw,Samuel Latimer Boothroyd,1902 *The Complete Idiot's Guide to Astronomy, 2e* Christopher De Pree, PhD,2001-08-01 Astronomy is a science as old as the stars With The Complete Idiot s Guide to Astronomy Second Edition learn Fascinating facts while taking

General Land Office,1931 **Exploring the Universe: A Laboratory Guide for Astronomy** Mike D. Reynolds,Michael E. Bakich,2015-01-01 Astronomy is a fun and challenging science for students This manual is intended for one and two semester astronomy courses and uses hands on engaging activities to get students looking at the sky and developing a lifelong interest in astronomy **Choosing and Using a Schmidt-Cassegrain Telescope** Rod Mollise,2012-12-06 Amateur astronomy is becoming more and more popular mostly because of the availability of relatively low cost astronomical telescopes of superb quality commercially made Schmidt Cassegrain and Maksutovs Rod Mollise s book contains everything amateur astronomers need to know about these telescopes Featuring but not exclusively the ubiquitous Meade and Celestron ranges he describes what these instruments will do how to use them and which are the best to choose This book includes everything There are sections on accessories observing techniques and hints and tips gleaned from his 25 years experience with this type of telescope cleaning collimating maintaining the telescope and mounting using the telescope in various conditions computer control imaging wet digital and CCD This is the perfect book for amateur astronomers who are about to invest in a new Schmidt Cassegrain or Maksutov telescope or for those who already have one and want to get the best out of it The Civil-engineer & Surveyor's Manual Michael McDermott,1879 *Visual Lunar and Planetary Astronomy* Paul G. Abel,2013-08-21 With the advent of CCDs and webcams the focus of amateur astronomy has to some extent shifted from science to art Visual work in astronomy has a rich history Today imaging is now more prominent However there is still much for the visual amateur astronomer to do and visual work is still a valid component of amateur astronomy Paul Abel has been addressing this issue by promoting visual astronomy wherever possible at talks to astronomical societies in articles for popular science magazines and on BBC TV s The Sky at Night Visual Lunar and Planetary Astronomy is a comprehensive modern treatment of visual lunar and planetary astronomy showing that even in the age of space telescopes and interplanetary probes it is still possible to contribute scientifically with no more than a moderately priced commercially made astronomical telescope It is believed that imaging and photography is somehow more objective and more accurate than the eye and this has led to a peculiar crisis of faith in the human visual system and its amazing processing power But by analyzing observations from the past we can see how accurate visual astronomy really is Measuring the rotational period of Mars and making accurate lunar charts for American astronauts were all done by eye The book includes sections on how the human visual system works how to view an object through an eyepiece and how to record observations and keep a scientific notebook The book also looks at how to make an astronomical rather than an artistic drawing Finally everything here will also be of interest to those imagers who wish to make their images more scientifically applicable by combining the methods and practices of visual astronomy with imaging **The NexStar User's Guide**
