State of Palestine Philip Leech, 2016-10-26 The Palestinian national movement reached a dead end and came close to disintegration at the beginning of the present century This critical analysis of internal Palestinian politics in the West Bank traces the re emergence of the Palestinian Authority's established elite in the aftermath of the failed unity government and examines the main security and economic agendas pursued by them during that period Based on extensive field research interviews and participant observation undertaken across several sites in Nablus and the surrounding area it provides a bottom up interpretation of the Palestinian Authority's agenda and challenges the popular interpretation that its governance represents the only realistic path to Palestinian independence As the first major account of the Palestinian Authority's political agenda since the collapse of the unity government this book offers a unique explanation for the failure to bring a Palestinian state into being and challenges assumptions within the existing literature by addressing the apparent incoherence between mainstream debates on Palestine and the reality of conditions there This book is a key addition to students and scholars interested in Politics Middle Eastern Studies and International Relations **Robert Parris Moses**

Laura Visser-Maessen, 2016-02-24 One of the most influential leaders in the civil rights movement Robert Parris Moses was essential in making Mississippi a central battleground state in the fight for voting rights As a leader of the Student Nonviolent Coordinating Committee SNCC Moses presented himself as a mere facilitator of grassroots activism rather than a charismatic figure like Martin Luther King Jr His self effacing demeanor and his success especially in steering the events that led to the volatile 1964 Freedom Summer and the formation of the Mississippi Freedom Democratic Party paradoxically gave

him a reputation of nearly heroic proportions Examining the dilemmas of a leader who worked to cultivate local leadership historian Laura Visser Maessen explores the intellectual underpinnings of Moses s strategy its achievements and its struggles This new biography recasts Moses as an effective hands on organizer safeguarding his ideals while leading from behind the scenes By returning Moses to his rightful place among the foremost leaders of the movement Visser Maessen testifies to Moses s revolutionary approach to grassroots leadership and the power of the individual in generating social change

The European Union Decoded Maria Lorca-Susino,2016-07-07 The European Union EU and the Eurozone became the economic integration example to follow for years However the worldwide economic crisis that unfolded in 2007 put the whole economic integration process in question the European project in jeopardy and the euro under pressure with serious doubts that it can survive its first crisis The core argument of this book is twofold First it seeks to explain the difficult political economic and fiscal idiosyncrasies of all member states in order to put the reasons for the economic crisis into a new and clear perspective Second it argues that the institutional response put forward to explain this tremendous crisis is flawed and dangerous because it does not solve the main underlying problem the deep differences among member states on their understanding of economic and financial behavior This study counters the leading institutional explanation for the economic crisis that has impacted the entire EU It presents a unique and provocative explanation of why the EU and the Eurozone are still immersed in an economic crisis and will be of key interest to students and scholars of European Politics and Economics

The Neurobiology and Genetics of Gilles de la Tourette Syndrome: New Avenues Through Large-Scale Collaborative Projects Peristera Paschou, Kirsten R. Müller-Vahl, 2018-03-13 Gilles de la Tourette Syndrome (TS) is a common albeit severely under diagnosed neuropsychiatric disorder that is caused by a complex genetic basis interacting with environmental factors. High comorbidity rates with other neurodevelopmental disorders such as attention deficit hyperactivity disorder and obsessive compulsive disorder raise the intriguing hypothesis of a shared etiological background. Abnormalities of corticostriatal thalamic cortical circuits, CSTC and dysfunction of both dopamine and serotonin neurotransmitter systems are assumed to be associated with TS. Recently multiple lines of evidence also point towards an important role of additional neurotransmitters such as histamine and glutamate. For a very long time efforts to elucidate the etiology and pathophysiology of TS have been fragmented and hampered by low statistical power. Finally after more than two decades of active research aiming to identify the etiology and pathophysiology of TS we are on the verge of a new era promising exciting and rapid discoveries in the field. Investigators from around the world representing multiple disciplines and scientific approaches are joining their efforts in large scale initiatives supported both by European Union and US National funding agencies such as the European funded EMTICS, TACTICS and TSGeneSEE consortia, the Marie Curie Initial Training Network TS EUROTRAIN and the European Society for the Study of TS joining forces with the NIH funded TSAICG, GGRI and Tic Genetics consortia. Importantly all these initiatives are supported by TS patient support and advocacy groups. Multiple resources are being consolidated and coming together to serve the study of TS including large well characterized patient cohorts and specialized epidemiological databases such as the unique resource of the Netherlands Twin Register. This research topic showcases current large scale collaborative efforts aiming to elucidate the genetic and neurobiological background of TS through diverse approaches from genomewide association studies aiming to identify common variants associated to the disorder to neuroimaging studies and animal models. Furthermore current approaches on the clinical assessment and management of the disorder are presented. Propelled by the gradual availability of large scale TS

cohorts novel methodologies and importantly sheer enthusiasm by multiple researchers working together across different countries the new era of the neurobiology of TS holds the promise to identify novel targets for improved therapies
