St. Augustine asserts that the role of these two important social aspects differs and as such it is impossible

specific health care profession provides valuable and effective services that meet society's health needs is a major objective for all health care academicians and researchers. Such skills are critical to ensure service reimbursement from an increasingly small pool of health care dollars. Demonstrating clinical effectiveness depends on the reporting of written research results through journal publication so that the health care community and larger society will be able to access and read evidence supporting health care services. Today several clinical reporting standard guidelines have been created by researchers to enhance the ability of readers to evaluate the quality and value of studies. *Journal Article Writing and Publication* is the first text to compile those clinical research reporting standards in one source and helps educators and novice researchers to better understand the skills needed for journal publication. Health care researchers must begin using these reporting standards in order to write manuscripts that are both correctly formatted and transparently convey all critical study strengths and limitations. Educators must teach these reporting standards to students who must evaluate research reports as consumers and possible future contributors to the literature through their own writing. *Journal Article Writing and Publication* by Dr. Sharon A. Gutman, a former editor of the *American Journal of Occupational Therapy*, provides specific guidelines based on the most commonly accepted reporting standards for the preparation and writing of general research studies, intervention effectiveness studies, instrument development and testing studies, and case reports. A section is devoted to helping authors understand the rules governing the reporting of statistical data in text and tables. Separate sections help authors understand the manuscript preparation and submission process, the revision process, and the etiquette guiding communication with editors and reviewers. Guidelines for the preparation of scholarly discussion papers and editorials are also provided. *Journal Article Writing and Publication* also features a section that aims to help doctoral students and newly minted faculty turn academic work and dissertations into publishable journal articles. Suggestions are provided to help clinicians turn clinical data into research databases that could serve as the foundation for pilot studies. Finally, information is provided to help authors better understand the ethical considerations of publication, including plagiarism, dual submissions, inappropriate authorship, copyright, and conflict of interest.

The first text of its kind to clearly explain each section of a research paper to students who are new at the process, this title outlines how to read and analyze research by learning concepts such as sampling design or relative risk and then seeing these abstract ideas brought to life in actual research articles. Students also apply these concepts in Application Questions and Critical Thinking Exercises in which they write abstracts, answer questions about evidenced-based study data, or use a checklist to critique a study. Students also learn the nuts and bolts of searching databases for appropriate articles using systematic reviews such as the Academy of
