

Mendel's Experiments and Heredity

Genetics - the study of inheritance (heredity)

→ how parental traits are passed to their offspring

Gregor Mendel

→ Lived 1822-1884

→ "father of genetics"

→ Foundation for modern-day genetics (through his discoveries that involved P1 & F2 generations)

→ Pea plant experiments: focused on patterns of inheritance & basis for the occurrence of variation in genetics

→ his basic knowledge of chromosomes or DNA: he called them "factors"

How exactly are your traits passed on?

→ by genes that are located on chromosomes

Alleles - different forms of the same gene; you inherit one of these alleles

Ex. gene = eye color allele = brown, blue, hazel

→ are located in the same position on homologous chromosomes
