Valery V. Vasiliev, Evgeny V. Morozov, 2018-06-12 *Advanced Mechanics of Composite Materials and Structures* analyzes contemporary theoretical models at the micro and macro levels of material structure. Its coverage of practical methods and approaches, experimental results, and optimization of composite material properties and structural component performance can be put to practical use by researchers and engineers. The fourth edition has been updated to reflect new manufacturing processes such as 3D printing of two matrix composite structural elements and new theories developed by the authors. The authors have expanded the content of advanced topic areas with new chapters on axisymmetric deformation of composite shells of revolution, composite pressure vessels, and anisogrid composite lattice structures. This revision includes enhanced sections on optimal design of laminated plates and additional examples of the finite element modelling of composite structures and numerical methods. *Advanced Mechanics of Composite Materials and Structures* Fourth edition is unique in that it addresses a wide range of advanced problems in the mechanics of composite materials such as the physical/statistical aspects of fiber strength, stress diffusion in composites with damaged fibers, nonlinear elasticity, and composite pressure vessels, to name a few. It also provides the foundation for traditional basic composite material mechanics, making it one of the most comprehensive references on this topic. Presents advanced material on composite structures, including chapters on composite pressure vessels and axisymmetric deformation of composite shells of revolution. Provides the applications of composite materials to spacecraft, aircraft, and marine, included throughout. Practical examples of analysis and design of real composite structural components. *Wildlife and Wind Farms - Conflicts and Solutions* Martin Perrow, 2017-05-02 Wind farms are an essential component of global renewable energy policy, and the action to limit the effects of climate change. There is, however, considerable concern over the impacts of wind farms on wildlife, leading to a wide range of research and monitoring studies, a growing body of literature, and several international conferences on the topic. This unique multi-volume work provides a comprehensive overview of the interactions between wind farms and wildlife. Volume 1 documents the current knowledge of the potential impacts upon wildlife during both construction and operation. An introductory chapter on the nature of wind farms and the impact assessment process is followed by a series of in-depth chapters documenting effects on climatic conditions, vegetation, terrestrial invertebrates, aquatic invertebrates, and fish, reptiles, and amphibians, birds, bats, and terrestrial mammals. A synopsis of the known and potential effects of wind farms upon wildlife in perspective concludes the volume. The authors have been carefully selected from across the globe from the large number of academics, consultants, and practitioners now engaged in wind farm studies for their influential contribution to the science. Edited by Martin Perrow and with contributions by 40 leading researchers, including Robert Barclay, Michael Dillon, Jan Olof Helldin, Hermann H. Tker, Jeffrey Lovich, Manuela de Lucas, and Eugene Takle. The authors represent a wide range of organisations and institutions, including the Universities of Calgary, Iowa State, Lund, Wyoming, US Geological Survey, Michael Otto Institut, im NABU.
