

RECONSTITUTION PROBLEM 1

- **Problem:** The doctor orders cefazolin sodium 1 gram IV. The label reads: Add 10 mL of bacteriostatic NaCL to the powdered cefazolin for a concentration of 500 mg per 5 mL. How many mL should the nurse give?
- The key to solving this type of problem is to **ignore extra information that is not necessary to calculate the desired dose**. Then apply the steps for dimensional analysis.
- BL: 1 g
- EL: mL
- CF: 1000 mg = 1 g and 500 mg = 5 mL
- NOTE: The 10 mL of diluent (liquid) is **not necessary** to calculate the dose; only the resulting concentration of the medication (500 mg = 5 mL) is necessary. The concentration means that there is 500 mg of medication in every 5 mL of the added liquid.
- Now setup and solve the equation. Click here for [answer to reconstitution 1](#)
