Cell Organization

Eukaryotic cells are a complex and busy place, but if you look closely, there are patterns that emerge. Each cell can be divided into two major parts: the nucleus and the cytoplasm.

- The **cytoplasm** is the portion of the cell outside the nucleus. It is made up of water and dissolved chemicals. Prokaryotic cells (that do not have a nucleus) also contain cytoplasm.
- Within the cytoplasm are several structures that act as if they are specialized organs. They are called **organelles**, which means "little organs".

The Nucleus

In the same way that the main office controls a large factory, the **nucleus is the control center of the cell**. The nucleus contains nearly all the cell's DNA and, with it, the coded instructions for making proteins and other important molecules.

The nucleus is surrounded by a nuclear envelope.

- The nuclear envelope is dotted with thousands of nuclear pores, which allow material to move into and out of the nucleus.
- A steady stream of proteins, RNA, and other molecules move through the nuclear pores to and from the rest of the cell. This is just like messages, instructions and blueprints moving into and out of a main office.

Chromosomes, which carry the cell's genetic information are found in the nucleus. Most of the time, chromosomes are spread out throughout the

Horizontal Rights Gautam Bhatia,2023-08-24 This book provides a new conceptual model for considering constitutional rights from a comparative perspective A prestigious club bars women from standing for executive positions A homeowner refuses to rent their house to a person on grounds of their race Each of these real life cases involves the exercise of private power which deprives individuals of their rights Can these individuals invoke the Constitution in response Horizontal Rights

An Institutional Approach brings a fresh perspective to these age old yet fraught issues This book argues that constitutional scholarship and doctrine across jurisdictions has proceeded from an inarticulate premise called default verticality This is based on a set of underlying philosophical assumptions which presumes that constitutional rights are presumptively applicable against the State and need special justification to be applied against private parties Departing from default verticality and its assumptions this book argues that constitutional rights should apply horizontally between private parties where the existence of an economic social or cultural institution creates a difference in power between the parties and allows one to violate the rights of the other The institutional approach aims to be both theoretically convincing as well as a providing a workable model for constitutional adjudication It applies both to classic issues such as restrictive covenants as well as cutting edge contemporary legal problems around the regulation of platform work and the distribution of property upon divorce This promises to be an exciting new contribution to the global conversation around constitutional rights and private power
