

Unit: Chemical Bonding **Answer Key** "Covalent Bonding" - WS #3

Directions: Please answer each question using your notes from today's class. ☺

1. What is the difference between a molecular formula, structural formula and an electron dot formula? Give an example of each.

A molecular formula gives the chemical make-up of one molecule. It does not show atom-to-atom connectivity. Example: C_2H_2

A structural formula uses lines instead of dots to show shared pairs of electrons.

Example: $H-H$

An electron dot formula uses dots instead of lines to show shared pairs of electrons.

Example: $H:H$

2. What is the difference between single, double, and triple covalent bonds? How many shared electrons are in each?

The difference between the types of bonds is: a single bond is two shared electrons, a double is four shared electrons, and a triple is six shared electrons.

3. Draw the electron dot and structural formulas for the following molecules.

Substance	Rough copy (work!)	Electron dot	Structural
a) Cl_2		<i>Note: The electron dot structures have dots in between each atom instead of lines.</i>	$\begin{array}{c} \cdot\cdot \\ \cdot \\ \text{Cl} \\ \cdot \\ \cdot\cdot \end{array} - \begin{array}{c} \cdot\cdot \\ \cdot \\ \text{Cl} \\ \cdot \\ \cdot\cdot \end{array}$
b) H_2S			$\begin{array}{c} \cdot\cdot \\ \cdot \\ \text{S} \\ \cdot \\ \cdot\cdot \\ \\ \text{H} \\ \cdot \\ \cdot\cdot \end{array} - \text{H}$
c) BrI			$\begin{array}{c} \cdot\cdot \\ \cdot \\ \text{I} \\ \cdot \\ \cdot\cdot \end{array} - \begin{array}{c} \cdot\cdot \\ \cdot \\ \text{Br} \\ \cdot \\ \cdot\cdot \end{array}$

Interatomic Bonding in Solids Valim Levitin, 2014-02-17 The connection between the quantum behavior of the structure elements of a substance and the parameters that determine the macroscopic behavior of materials has a major influence on the properties exhibited by different solids Although quantum engineering and theory should complement each other this is not always the case This book aims to demonstrate how the properties of materials can be derived and predicted from the features of their structural elements generally electrons In a sense electronic structure forms the glue holding solids together and it is central to determining structural mechanical chemical electrical magnetic and vibrational properties The main part of the book is devoted to an overview of the fundamentals of density functional theory and its applications to computational solid state physics and chemistry The author shows the technique for construction of models and the computer simulation methods in detail He considers fundamentals of physical and chemical interatomic bonding in solids and analyzes the predicted theoretical outcome in comparison with experimental data He applies first principle simulation methods to predict the properties of transition metals semiconductors oxides solid solutions and molecular and ionic crystals Uniquely he presents novel theories of creep and fatigue that help to anticipate and prevent possibly fatal material failures As a result readers gain the knowledge and tools to simulate material properties and design materials with desired characteristics Due to the interdisciplinary nature of the book it is suitable for a variety of markets from students to engineers and researchers

Nuclear Magnetic Resonance Spectroscopy Teresa Lehmann, 2018-06-13 Nuclear Magnetic Resonance NMR spectroscopy is a nondestructive technique that can be used to characterize a wide variety of systems Sustained development of both methodology and instrumentation have allowed NMR to evolve as a powerful technology with applications in pure sciences medicine drug development and important branches of industry NMR provides precise structural information down

to each atom and bond in a molecule and is the only method for the determination of structures of molecules in a solution This book compiles a series of articles describing the application of NMR in a variety of interesting scientific challenges The articles illustrate the versatility and flexibility of NMR Aromatic and Heteroaromatic Chemistry C W Bird,G W H Cheeseman,2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued Applied Mechanics Reviews ,1982 *Implementation and World Politics* Alexander Betts,Phil Orchard,2014 A significant amount of International Relations scholarship examines the role of international norms in world politics Existing work though focuses mainly on how these norms emerge and the process by which governments sign and ratify them In conventional accounts the story ends there Yet this tells us very little about the conditions under which these norms actually make any difference in practice When do these norms actually change what happens on the ground In order to address this analytical gap the book develops an original conceptual framework for understanding the role of implementation in world politics It applies this framework to explain variation in the impact of a range of people centred norms relating to humanitarianism human rights and development The book explores how the same international norms can have radically different effects in different national and local contexts or within particular organizations and in turn how this variation can have profound effects on people s lives How do international norms change and adapt at implementation Which actors and structures matter for shaping whether implementation actually takes place and on whose terms And what lessons can we derive from this for both International Relations theory and for international public policy makers Collectively the chapters explore these themes by looking at three different types of norms treaty norms principle norms and policy norms across policy fields that include refugees internal displacement crimes against humanity the use of mercenaries humanitarian assistance aid transparency civilian protection and the responsibility to protect **Bonded Cement-Based Material Overlays for the Repair, the Lining or the Strengthening of Slabs or Pavements** Benoît Bissonnette,Luc Courard,David W. rehabilitation bonded overlays are often the most economical alternative The primary purpose of overlays is to extend the life of the candidate structures either by restoring the quality and integrity of the surface and or the re establishing or improving the load carrying capacity Nevertheless the durability of bonded overlay systems still draws concerns in the technical community because of bond sustainability problems encountered in a number of cases At this time there is still no accepted design approach or methodology that can warrant the practitioner a successful outcome of the repair This State of Art report summarizes the findings with respect to all aspects involved in the overlaying process Jacaranda Chemistry 2 VCE Units 3 and 4, 3e learnON and Print Robert Stokes,Angela Stubbs,Neale Taylor,Jason Bourke,Ben Williams,Maida

Organometallic chemistry is an interdisciplinary science which continues to grow at a rapid pace Although there is continued interest in synthetic and structural studies the last decade has seen a growing interest in the potential of organometallic chemistry to provide answers to problems in catalysis synthetic organic chemistry and also in the development of new materials This Specialist Periodical Report aims to reflect these current interests reviewing progress in theoretical organometallic chemistry main group chemistry the lanthanides and all aspects of transition metal chemistry Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the

fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume *Reviews of Pure and Applied Chemistry*, 1963 **Introduction To Percolation Theory** Dietrich Stauffer, Amnon Aharony, 2018-12-10
