Lesson Objectives

-  Describe how matter cycles among the living and nonliving parts of an ecosystem.
-  Describe how water cycles through the biosphere.
-  Explain why nutrients are important in living systems.
-  Describe how the availability of nutrients affects the productivity of ecosystems.

Lesson Summary

Recycling in the Biosphere _____, unlike energy, is _____ within and between ecosystems. Elements pass from one organism to another and from one part of the biosphere to another through _____, which are closed loops powered by the flow of energy.

The Water Cycle Water moves between the _____, the _____, and _____.

- ▶ Evaporation is the process in which water changes from a liquid to a gas.
- ▶ Transpiration is the process in which water evaporates from the leaves of plants. Other steps in the water cycle include _____.

Nutrient Cycles The chemical substances that an organism needs to survive are called _____. Like water, nutrients pass through organisms and the environment.

- ▶ **Carbon Cycle:** Carbon is a key ingredient of all _____. Processes involved in the carbon cycle include photosynthesis and human activities such as burning.
- ▶ **Nitrogen Cycle:** Nitrogen is needed by all organisms to _____. Processes involved in the nitrogen cycle include _____ and _____.
 - In **nitrogen fixation**, certain _____ convert _____ into _____.
 - In **denitrification**, other soil _____ nitrogen compounds called _____ back into _____.
- ▶ **Phosphorus Cycle:** Phosphorus is needed for molecules such as _____ and _____. Most of the phosphorus in the biosphere is _____ and _____. Stored phosphorus is gradually released into water and soil, where it is used by organisms.

Tremblay,Louis Varfalvy,Charlotte Roehm,Michelle Garneau,2011-04-30 In a time when an unquestionable link between anthropogenic emissions of greenhouse gases and climatic changes has finally been acknowledged and widely documented through IPCC reports the need for precise estimates of greenhouse gas GHG production rates and emissions from natural as well as managed ecosystems has risen to a critical level Future agreements between nations concerning the reduction of their GHG emissions will pend upon precise estimates of the present level of these emissions in both natural and managed terrestrial and aquatic environments From this viewpoint the present volume should prove to a benchmark contribution because it provides very carefully assessed values for GHG emissions or exchanges between critical climatic zones in aquatic environments and the atmosphere It also provides unique information on the biases of different measurement methods that may account for some of the contradictory results that have been published recently in the literature on this subject Not only has a large array of current measurement methods been tested concurrently here but a few new approaches have also been developed notably laser measurements of atmospheric CO concentration 2 gradients Another highly useful feature of this book is the addition of nitroing and process studies as well as modeling **Telecourse Cycles of Life** Gerald L.
