Evidence-Based Cybersecurity Pierre-Luc Pomerleau, David Maimon, 2022-06-23 The prevalence of cyber dependent crimes and illegal activities that can only be performed using a computer computer networks or other forms of information communication technology has significantly increased during the last two decades in the USA and worldwide As a result cybersecurity scholars and practitioners have developed various tools and policies to reduce individuals and organizations risk of experiencing cyber dependent crimes However although cybersecurity research and tools production efforts have increased substantially very little attention has been devoted to identifying potential comprehensive interventions that consider both human and technical aspects of the local ecology within which these crimes emerge and persist Moreover it appears that rigorous scientific assessments of these technologies and policies in the wild have been dismissed in the process of encouraging innovation and marketing Consequently governmental organizations public and private companies allocate a considerable portion of their operations budgets to protecting their computer and internet infrastructures without understanding the effectiveness of various tools and policies in reducing the myriad of risks they face Unfortunately this practice may complicate organizational workflows and increase costs for government entities businesses and consumers The success of the evidence based approach in improving performance in a wide range of professions for example medicine policing and education leads us to believe that an evidence based cybersecurity approach is critical for improving cybersecurity efforts This book seeks to explain the foundation of the evidence based cybersecurity approach review its relevance in the context of existing security tools and policies and provide

concrete examples of how adopting this approach could improve cybersecurity operations and guide policymakers decision making process The evidence based cybersecurity approach explained aims to support security professionals policymakers and individual computer users decision making regarding the deployment of security policies and tools by calling for rigorous scientific investigations of the effectiveness of these policies and mechanisms in achieving their goals to protect critical assets This book illustrates how this approach provides an ideal framework for conceptualizing an interdisciplinary problem like cybersecurity because it stresses moving beyond decision makers political financial social and personal experience backgrounds when adopting cybersecurity tools and policies This approach is also a model in which policy decisions are made based on scientific research findings **Strong Security Governance through Integration and Automation** Priti Sikdar,2021-12-23 This book provides step by step directions for organizations to adopt a security and compliance related architecture according to mandatory legal provisions and standards prescribed for their industry as well as the methodology to maintain the compliances It sets a unique mechanism for monitoring controls and a dashboard to maintain the level of compliances It aims at integration and automation to reduce the fatigue of frequent compliance audits and build a standard baseline of controls to comply with the applicable standards and regulations to which the organization is subject It is a perfect reference book for professionals in the field of IT governance risk management and compliance The book also illustrates the concepts with charts checklists and flow diagrams to enable management to map controls with compliances

Nuclear Power Plants: Innovative Technologies for Instrumentation and Control Systems Yang Xu,Yongbin Sun,Yanyang Liu,Feng Gao,Pengfei Gu,Zheming Liu,2022-04-18 This book is a compilation of selected papers from the Sixth International Symposium on Software Reliability Industrial Safety Cyber Security and Physical Protection of Nuclear Power Plant held in October 2021 in Zhuji Zhejiang China The purpose of this symposium is to discuss Inspection test certification and research for the software and hardware of Instrument and Control I C systems in nuclear power plants NPP such as sensors actuators and control system It aims to provide a platform of technical exchange and experience sharing for those broad masses of experts and scholars and nuclear power practitioners and for the combination of production teaching and research in universities and enterprises to promote the safe development of nuclear power plant Readers will find a wealth of valuable insights into achieving safer and more efficient instrumentation and control systems **Artificial Intelligence in Business** Pavankumar Gurazada & Seema Gupta, Artificial Intelligence in Business is transforming the way organizations operate driving innovation increasing efficiency and enabling smarter data driven decision making Yet for many professionals and students the gap between complex technical concepts and practical business applications can feel overwhelming This book bridges that gap with clarity relevance and purpose Designed for MBA students business leaders and aspiring AI practitioners Artificial Intelligence in Business cuts through the hype to provide a grounded accessible and actionable guide to real world AI From foundational principles like machine learning and deep learning to advanced applications in marketing

finance supply chain and HR each chapter offers practical insights supported by real world use cases and code implementations Whether you re aiming to enhance customer engagement streamline operations or manage risk more effectively this book equips you with the knowledge and tools to apply AI strategically in a business context
