

COSSOR 500, 501, 502 & 520 radio receivers

FOUR "Melody Maker" table radios and a console radiogram are covered in this Data Sheet. Models 500 and 501AC are identical receivers for a.c. operation, except for the cabinet which is wooden in the Model 500 and plastic in the Model 501AC. The radiogram is Model 502 and this uses exactly the same circuit, although the mechanical arrangement of the chassis differs. Model 520 is a later receiver, using the same chassis as the Model 500, but housed in a new cabinet. The fifth receiver is Model 501U, which is an a.c.-d.c. version of the chassis.

CIRCUIT DETAILS

On medium and long wave bands, bottom-end coupling is used by virtue of the impedance of C1. On short waves, the signal is coupled to the grid circuit via L1 to L2, the impedance of C1 being so small at these frequencies that no coupling takes place in that way. For local station reception, a built-in frame aerial is provided, mounted on the cabinet back, and which can be plugged into the aerial and earth sockets.

The triode section of V1 functions as a conventional shunt-fed local oscillator, coupling to the mixer being by internal

inter-electrode capacitances. The short-wave grid coil is variable (L7) with parallel trimming by C14. The fixed medium and long wave coils (L9, L10) are parallel-trimmed by C15 (l.w. only) and C12, with series padding by C13, C16 and C18.

The i.f. signal is coupled via the i.f. transformer L5/L6 to V2, a pentode i.f. amplifier, and thence via L12/L13 to the strapped diodes of V3. The d.c. component in the rectified output, developed across the diode load, is fed back as a.g.c. bias via the decoupling components R6 and C17, to the signal grids of V1 and V2. The a.f. component across the diode load, R9 (volume control), is coupled via C24 to the triode section of the valve for amplification. An i.f. filter is formed by R18, C21 and C22. Sockets are provided on the back of the chassis for the use of a high impedance or crystal pick-up.

The audio signal is a.c. coupled to the output stage V4, R13 being the grid resistor and R14, C27 and C28 forming a tone control circuit, R14 being the manual control. Fixed tone correction is provided by C29 across the primary of the output transformer and by the resistors R12 and R15, which form a negative feedback potential divider between the secondary of the output transformer and the V3 cathode circuit.

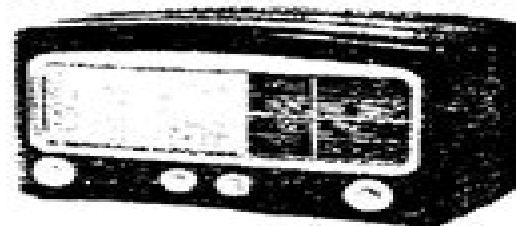

The speaker is an 8-in. p.m. unit with a speech coil impedance of 30. The undistorted output is 2.5 watts. Sockets are provided for the use of a 30 external speaker.

The a.c. power pack uses a full wave rectifier V5, with smoothing by C31, R17 and C26. The rectified h.t. current is passed through part of the primary winding of the output transformer in order to neutralise residual hum.

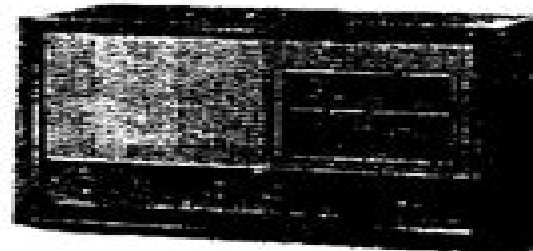

Model 502

This radiogram version uses an identical circuit to that of the 500/501AC models, but the output and rectifying stages are separated from the main
