Cut-and-Paste Genetics Sahotra Sarkar, 2021-09-15 The emergence of CRISPR Cas9 technology has revolutionized gene editing The Nobel prize for chemistry was awarded to Emmanuelle Charpentier and Jennifer Doudna the scientists responsible for its discovery in 2020 and it is considered the frontier of sophisticated medical science This technology contains the promise that both gene therapy and eugenic control of human evolution is possible even plausible in our near future This book looks at these developments in the context of the history of previous social and scientific attempts at genetic editing and explores the policy and ethical challenges they raise It presents the case for altering the human germ line which contains and controls hereditary genetic information to eliminate a large number of genetic diseases controlled by a single or few genes while pointing out that gene therapy is likely to be ineffective for diseases with more complex causes In parallel it explores the possibility of genetic enhancement in a set of case studies But it also argues that in general genetic enhancement is ethically problematic and should be approached with caution Given the success of CRISPR Cas9 gene editing and the explosion of related techniques in practice it would be virtually impossible to ban germ line editing in our future A more useful goal is to put regulation in place with oversight that represents the interests of society That in turn requires an informed public discussion of these issues which is the intention of this book **The School Science Review**, 2000

Sowerby, 1862 **East Africa's grasses and fodders: Their ecology and husbandry** G. Boonman, 2013-03-09 The series Tasks for Vegetation Science is devoted to a variety of research aspects in vegetation science pure as well as applied Of the applied problems one of the most pressing is to achieve better knowledge and improvement of the pasture vegetation in tropical and subtropical regions As series editor I was impressed by the sheer volume of useful scientific information concerning pasture plants from East Africa collected during many years by Dr Boonman and compiled in one manuscript Dr Boonman first came to East Africa in 1963 on an overland journey along the river Nile which took him from Alexandria in Egypt to Lake Victoria in Uganda and Kenya and back again After a brief spell as a cotton agronomist in the Sudan Gezira he joined the grassland research team at Kitale Kenya in 1966 Improvement of seed yield of tropical grasses was his principal interest which finally led him into the field of breeding grasses Well known varieties from his work include Boma Elmba Rhodesgrass as well as Clone 13 Elephantgrass In 1979 he was recalled to The Netherlands to head a cooperative seed company involved in the breeding of grasses and cereals The author has focused this study on one region Eastern Africa Global application of theories runs into conflicts too easily with local types of farming if not with bare economics Very few books can be found that describe existing practices and seek local answers by digging deep in the stacks of old local reports **Technological Dictionary**, 1855 *Heat Stabilized Wood (staybwood)* Alfred J.
