case studies It should make us all reflect on what we are doing and how we can repair the damage Margaret Brown Professor of Mathematical Education King's College London The book speaks to me as one of those texts that will become seminal in mathematics education It is original refreshing and despite a complicated plot points to some ways forward It is engagingly written if at times perhaps a little bit no nonsense in tone It will be of interest to teachers and teacher educators as well as providing a theoretical stance that should inform future research British Educational Research Journal The study of mathematics together with other gendered subjects such as science and engineering usually attracts more male than female pupils particularly at more advanced levels In this book Heather Mendick explores this phenomenon addressing the important question of why more boys than girls choose to study mathematics She combines new research with an original theoretical approach to argue that doing mathematics is doing masculinity The book illuminates what studying mathematics means for both students and teachers and offers a broad range of insights into students' views and practices In addition to the words of young people learning mathematics the masculinity of mathematics is explored through historical material and cinematic representations Heather Mendick discusses the ways in which the alignment of mathematics with masculinity creates tensions for girls and women doing the subject These tensions are sensitively explored through interviews with young men and women to show how doing mathematics fits or conflicts with their gender identities Finally the book explores the implications for teachers including ways to promote gender equity in mathematics education This is key reading for students on courses in gender and education mathematics education gender and curriculum and social justice
