Yang, Huansheng Ning, 2008-03-05 Ubiquitous and pervasive technologies such as RFID and smart computing promise a world of networked and interconnected devices Everything from tires to toothbrushes could soon be in communications range heralding the dawn of an era in which today's Internet of People gives way to tomorrow's Internet of Things where billions of objects System Programming in Linux Stewart Weiss, 2015-10-14 Learn to write real Linux software not just run it Most programmers never learn how Linux really works Why Because system programming is rarely taught and the tools can be intimidating without the right guidance As a result many developers stick to high level languages and frameworks writing code that runs on Linux without understanding how it interacts with Linux In today's world that's not enough to stand out Especially as more companies turn to AI to write their software the question becomes How do you stay relevant in an AI driven world You learn how things really work If you've ever wondered how processes are created how memory and files are managed or how programs communicate in a Unix environment System Programming in Linux will make it all make sense This is a hands on guide to writing software that interfaces directly with the Linux operating system You'll go beyond shell commands and abstractions to understand what the kernel is doing and how to leverage it through your own code Rather than telling you how to solve each problem Professor Stewart N Weiss guides you through the process of discovering the solution yourself Start with the core concepts of Unix and Linux then work your way up to advanced topics like process control signals interprocess communication threading and non blocking I/O Each chapter includes conceptual

diagrams annotated source code and practical projects to help you immediately apply what you've learned. You'll explore topics such as The structure of Unix and Linux operating systems and why it matters Using system calls to create and manage processes The mechanics of signals timers and interprocess communication Using synchronization tools to write multithreaded programs Interacting with filesystems devices and terminals Building text based user interfaces using ncurses Developing programs that are robust efficient and portable

At Hunter College Professor Weiss built the course this book is based on and he has helped thousands of students go from confusion to confidence in his over 40 years of teaching programming His clear conversational style technical depth and focus on real world application make this one of the most approachable and powerful system programming books available As Linux continues to dominate development server and embedded environments understanding the system behind your software isn't just helpful it's essential Whether you're a student developer or sysadmin this book gives you the tools to work directly with Linux and the insight to understand what's really happening under the hood
