Berndt, 2014-06-01 The Metis of Projects addresses veteran project manager Ben Berndt s unease with the use of established project management frameworks given their general inefficacy Despite the use of these frameworks it is estimated that some 30% of projects still fail because they deliver too late cost more than expected and or lack quality Often projects and their environments are too complex to be controlled by rather linear frameworks Where most practitioners define complexity as complicated most academics define complexity more correctly as interrelatedness In recent years the academic community has developed several level of complexity frameworks however these frameworks are not commonly known to practitioners and are therefore not regularly used And when examined further these frameworks appear to be merely environmental scans used to assess the level of complexity in the project management environment But projects also carry inherent complexity

they are socially complex and it is this social complexity that paradoxically needs management Combined with personality assessments social network theory is used here to glean a better understanding of the social complexity in a project Berndt believes that following Hugo Letiche and Michael Lissack s emergent coherence concept managers should steer clear of frameworks in order to come to grips with the complex and so he introduces whole systems methodologies in which group understanding is used to continually set a next step Berndt concludes his study by describing his multi view multi tool participative project management style which he thinks best aligns with managing the complex
