Water-Soluble Polymers for Petroleum Recovery G.A. Stahl, D.N. Schulz, 2012-12-06 We both found ourselves working on water soluble polymers for oil recovery in the early 1980's Our previous backgrounds involved the synthesis and characterization of hydrocarbon polymers for everything from elastomers to plastics As such we were largely

unprepared for the special difficulties associated with water soluble polymers in general and their use in enhanced oil recovery EOR in particular Oil patch applications have a jargon and technical heritage quite apart from that usually experienced by traditional polymer scientists At that time no books were available to help us get up to speed in the polymers for oil recovery field Since then there have been a number of symposia on this topic but still few books especially from the polymer rather than the field applications perspective Synthetic water soluble swellable polymers have commercial importance in such application as water treatment cosmetics and foods Yet these polymers have not received the scientific technological attention they deserve The application of water soluble polymers to oil recovery has in fact highlighted the need for new water based materials and a fundamental understanding of their structure and use Interest has been spurred not only for the potential economic credits from enhanced oil recovery and an augmented polymers business but also by the challenge of designing water soluble polymers for harsh environments
