Degree Theory for Discontinuous Operators Rubén Figueroa Sestelo, Rodrigo López Pouso, Jorge Rodríguez López, 2021-09-21 This unique book contains a generalization of the Leray Schauder degree theory which applies for wide and meaningful types of discontinuous operators. The discontinuous degree theory introduced in the first section is subsequently used to prove new applicable discontinuous versions of many classical fixed point theorems such as Schauder's Finally readers will find in this book several applications of those discontinuous fixed point theorems in the proofs of new existence results for discontinuous differential problems Written in a clear expository style with the inclusion of many examples in each chapter this book aims to be useful not only as a self contained reference for mature researchers in nonlinear analysis but also for graduate students looking for a quick accessible introduction to degree theory techniques for discontinuous differential equations Optimal Control of Dynamic Systems Driven by Vector Measures N. Saker, 2016-10-20 The book is devoted to dynamic inequalities of Hardy type and extensions and generalizations via convexity on a time scale T In particular the book contains the time scale versions of classical Hardy type inequalities Hardy and Littlewood type inequalities Hardy Knopp type inequalities via convexity Copson type inequalities Copson Beesack type inequalities Liendeler type inequalities Levinson type inequalities and Pachpatte type inequalities Bennett type inequalities Chan type inequalities and Hardy type inequalities with two different weight functions These dynamic inequalities contain the classical continuous and discrete inequalities as special cases when T R and T N and can be extended to different types of inequalities on different time scales such as T hN h 0 T qN for q 1 etc In this book the authors followed the history and development of these inequalities Each section in self contained and one can see the relationship between the time scale versions of the inequalities and the classical ones To the best of the authors knowledge this is the first book devoted to Hardy typeinequalities and their extensions on time scales Dynamic Network User Equilibrium Terry L. Friesz, Ke Han, 2023-08-07 This book presents advanced research in a relatively new field of scholarly inquiry that is usually referred to as dynamic network user equilibrium now almost universally abbreviated as DUE It provides the first synthesis of results obtained over the last decade from applying the differential variational inequality DVI formalism to study the DUE problem In particular it explores the intimately related problem of dynamic network loading which determines the arc flows and effective travel delays or generalized travel costs arising from the expression of departure rates at the origins of commuter trips between the workplace and home In particular the authors show that dynamic network loading with spillback of queues into upstream arcs may be formulated as a differential algebraic equation system. They demonstrate how the dynamic network loading problem and the dynamic traffic user equilibrium problem may be solved simultaneously rather than sequentially as well as how the first in first out queue discipline may be maintained for each when Lighthill Whitham Richardson traffic flow theory is used A number of recent and new extensions of the DVI based theory of DUE and corresponding examples are presented and discussed Relevant mathematical background material is provided to make the book as accessible as possible
