Rural Electrification Strategies For Distributed Generation:

Rural Electrification Hisham Zerriffi, 2010-11-08 For those in developed nations suddenly being without electricity is a disaster power cuts have us fretting over the food stored in the freezer and even a few hours without lights televisions or air conditioning is an ordeal However for an estimated 1.6 billion people worldwide the absence of electricity is their daily experience An untold number of others live with electricity that is erratic and of poor quality How can electric power be brought into their lives when the centralized utility models that have evolved in developed nations are not an economically viable option Poor rural communities in developing nations cannot simply be plugged in to a grid Small scale Distributed Generation DG ranging from individual solar home systems to village level grids run off diesel generators could provide the answer and this book compares around 20 DG enterprises and projects in Brazil Cambodia and China each of which is considered to be a business model for distributed rural electrification While large centralized power projects often rely on big subsidies this study shows that privately run and localized solutions can be both self sustaining and replicable Its three sections provide a general introduction to the issue of electrification and rural development set out the details of the case studies and compare the models involved and discuss the important thematic issues of equity access to capital and cost recovery Hisham Zerriffi shows that in each case it is not simply a matter of matching a particular technology to a particular need Numerous institutional factors come into play including the regulatory regime access to financial services and government utility support or opposition to the DG alternative Despite this in many countries the question is not whether DG has a role to play Rather it is a question of how it will play a role

Escaping the Energy Poverty Trap Michael Aklin, Patrick Bayer, S.P. Harish, Johannes Urpelainen, 2018-11-27 The first comprehensive political science account of energy poverty arguing that governments can improve energy access for their citizens through appropriate policy design In today's industrialized world almost everything we do consumes energy While industrialized countries enjoy all the amenities of modern energy more than a billion people in the developing world still lack energy access Why is energy poverty persistent in some countries and not in others Offering the first comprehensive political science account of energy poverty Escaping the Energy Poverty Trap explores why governments have or have not been able to lead in providing modern energy to their least advantaged citizens Focusing on access to modern cooking fuels and household electrification the authors develop a new political economic theory that introduces government interest institutional capacity and local accountability as key determinants of energy access They draw on case studies from India East Asia Africa and Latin America to offer the optimistic conclusion that governments can improve institutional capacity and local accountability through appropriate policy design Energy poverty is a policy problem the authors assert and engaging with it as such offers new opportunities not only for ensuring equal energy access but also for political economic and environmental development

Committee on Appropriations. Subcommittee on Energy and Water Development,2001 *Renewables* Michael Aklin,Johannes Urpelainen,2018-03-23 A comprehensive political analysis of the rapid growth in renewable wind and solar power mapping an energy transition through theory case studies and policy Wind and solar are the most dynamic components of the global power sector How did this happen After the 1973 oil crisis the limitations of an energy system based on fossil fuels created an urgent need to experiment with alternatives and some pioneering governments reaped political gains by investing heavily in alternative energy such as wind or solar power Public policy enabled growth over time and economies of scale brought down costs dramatically In this book Michael Aklin and Johannes Urpelainen offer a comprehensive political analysis of the rapid growth in renewable wind and solar power mapping an energy transition through theory case studies and policy analysis Aklin and Urpelainen argue that because the fossil fuel energy system and political support for it are so entrenched only an external shock an abrupt rise in oil prices or a

nuclear power accident for example allows renewable energy to grow They analyze the key factors that enable renewable energy to withstand political backlash andt they draw on this analysis to explain and predict the development of renewable energy in different countries over time They examine the pioneering efforts in the United States Germany and Denmark after the 1973 oil crisis and other shocks explain why the United States surrendered its leadership role in renewable energy and trace the recent rapid growth of modern renewables in electricity generation describing among other things the return of wind and solar to the United States Finally they apply the lessons of their analysis to contemporary energy policy issues
