

## Understanding the Costs Involved in Mutual Fund Investments

Bob is debating purchasing a mutual fund, but he has some questions for his financial advisor, Cho. The following table presents information on four different open-end mutual funds that Bob and Cho are discussing. Use the information in the table to answer the questions that follow.

| FUND   | NAV   | NET CHG | YTD % RET |
|--------|-------|---------|-----------|
| WTF p  | 12.22 | -0.04   | 2.4       |
| TRRG r | 15.77 | 0.06    | 5.5       |
| RFCn   | 29.81 | 0.20    | 8.0       |
| BRRT   | 43.21 | 0.29    | 9.1       |

**BOB:** After some research, I've narrowed it down to these four funds, but can you explain to me the relationship between 12b-1 fees and fund performance?

**CHO:** Generally, funds that charge 12b-1 fees, such as WTF p, do not necessarily outperform funds that do not charge these fees.

**BOB:** What about front-end load fees? For example, suppose BRRT has a front-end load fee of 6%. When do I pay this fee?

**CHO:** If you purchase 100 shares of this fund at the NAV, you will pay a commission of  . But when you sell these shares you will pay  in front-end fees.

**BOB:** It sounds like these fees could start to add up. What's the most I can expect to pay in fees?

**CHO:** If a fund charges a 4% front-end load and a 4% 12b-1 fee, then it can charge a maximum of only  % in back-end load charges without violating the cap.

**BOB:** Thanks! This was really helpful. So it sounds like you'd recommend looking for no-load funds whenever possible.

*Conceptual Approach to the CSAT (Civil Services Aptitude Test) Paper II* ,      *Particle Physics and the Universe* Josip Trampetic, Julius Wess, 2006-01-25 The Adriatic Meetings have traditionally been conferences on the most advanced status of science They are one of the very few conferences in physics aiming at a very broad participation of young and experienced researchers with different backgrounds in particle physics Particle physics has grown into a highly multifaceted discipline

over the sixty years of its existence mainly because of two reasons Particle physics as an experimental science is in need of large scale laboratory set ups involving typically collaborations of several hundreds or even thousands of researchers and technicians with the most diverse expertise This forces particle physics being one of the most fundamental disciplines of physics to maintain a constant interchange and contact with other disciplines notably solid state physics and laser physics cosmology and trophysics mathematical physics and mathematics Since the expertise necessary in doing research in particle physics has become tremendously demanding in the last years the eld tends to organize purely expert conferences meetings and summer schools such as for detector development for astroparticle physics or for string theory

TheAdriaticMeetingthroughitsentirehistoryhasbeenaplacefor exchanging exchange between theory and experiment The 9th Adriatic Meeting successfully continued this tradition and even intensified the cross discipline communication by establishing new contacts between the community of cosmologists and of particle physicists The exchange between theorists and experimentalists was impressively intensive and will certainly have a lasting effect on several research projects of the European and world wide physics community
