Gerald Young, 2014-02-11 This book is a comprehensive analysis of the definitions concepts and recent research on malingering feigning and other response biases in psychological injury forensic disability populations It presents a new model of malingering and related biases and develops a diagnostic system based on it that is applicable to PTSD chronic pain and TBI Included are suggestions for effective practice and future research based on the literature reviews and the new systems which are useful also because they can be used readily by psychiatrists as much as psychologists In Malingering Feigning and Response Style Assessment in Psychiatric Psychological Injury Dr Young ambitiously sets out to articulate and synthesize the polarities involved in the assessment of response styles in psychological disabilities including PTSD pain and TBI He does so thoroughly and very even handedly neither minimizing the degree that outright faking can be found in substantial numbers of examinees nor disregarding the possibility that there can be causes for validity test failure other than malingering He reviews the prior systems for classifying evidence of malingering and proposes his own criteria for feigned PTSD These are conservative and well grounded in the prior literature Finally the book contains dozens of very recent references giving testament to Dr Young's immersion in the personal injury literature as might be expected from his experience as founder and Editor in Chief for Psychological Injury and the Law Reviewer Steve Rubenzer Ph D ABPP Board Certified Forensic Psychologist

Adventures in Stochastic Processes Sidney I. Resnick, 2013-12-11 Stochastic processes are necessary ingredients for building models of a wide variety of phenomena exhibiting time varying randomness In a lively and imaginative presentation studded with examples exercises and applications and supported by inclusion of computational procedures the author has created a textbook that provides easy access to this fundamental topic for many students of applied sciences at many levels With its carefully modularized discussion and crystal clear differentiation between rigorous proof and plausibility argument it is accessible to beginners but flexible enough to serve as well those who come to the course with strong backgrounds The prerequisite background for reading the book is a graduate level pre measure theoretic probability course No knowledge of measure theory is presumed and advanced notions of conditioning are scrupulously avoided until the later chapters of the book The tools of applied probability discrete spaces Markov chains renewal theory point processes branching processes random walks Brownian motion are presented to the reader in illuminating discussion

Applications include such topics as queuing storage risk analysis genetics inventory choice economics sociology and other
Because of the conviction that analysts who build models should know how to build them for each class of process studied the
author has included such constructions **Because Without Cause** Marc Lange,2017 Not all scientific explanations work
by describing causal connections between events or the world s overall causal structure In addition mathematicians regard
