## Drawing Angles

You can use a protractor to draw angles and to compare angles. Use the protractor to draw angle (50) with a measure of 50°.

**Step 1:** Place the protractor on a flat surface. The center of the protractor should be on the vertex of the angle. The base line of the protractor should be on one of the rays of the angle.

**Step 2:** Draw an arc across the protractor. The arc should be drawn at the point where the ray intersects the protractor's edge.

**Step 3:** Draw the second ray of the angle. The ray should start at the vertex and pass through the arc.

**Step 4:** Label the angle with its measure. In this case, the angle is 50°.

*How to Use Problem-Based Learning in the Classroom* Robert Delisle,1997-11-15 Engaging and motivating students especially the least motivated learners is a daily challenge But with the process of problem based learning PBL any teacher can create an exciting active classroom where students themselves eagerly build problem solving skills while learning the content necessary to apply them With problem based learning students work begins with an ill defined problem Key to this problem is how it explicitly links something important in students daily lives to the classroom This motivational feature is vital as students define the what where and how of resolving the problem situation Problem based learning may sound potentially chaotic and haphazard but it rests on the firm foundation of a teacher s work behind the scenes The teacher develops a problem long before students see it specifically choosing the skills and content the problem will emphasize and matching those to curriculum and standards Though a PBL problem will have no right answer the teacher structures the experience so that specific learning takes place as students generate the problem solving steps research issues and produce a final product The teacher guides without leading assists without directing Note This product listing is for the Adobe Acrobat PDF version of the book
