Tutte The first nontrivial results for systoles of surfaces are the two classical inequalities of C. Loewner and P. Pu relying on

integral geometric identities in the case of the two dimensional torus and real projective plane respectively Currently systolic geometry is a rapidly developing field which studies systolic invariants in their relation to other geometric invariants of a manifold This book presents the systolic geometry of manifolds and polyhedra starting with the two classical inequalities and then proceeding to recent results including a proof of M Gromov s filling area conjecture in a hyperelliptic setting It then presents Gromov s inequalities and their generalisations as well as asymptotic phenomena for systoles of surfaces of large genus revealing a link both to ergodic theory and to properties of congruence subgroups of arithmetic groups The author includes results on the systolic manifestations of Massey products as well as of the classical Lusternik Schnirelmann category

Coffee,1988 Yangians and Classical Lie Algebras Alexander Molev,2007 The Yangians and twisted Yangians are remarkable associative algebras taking their origins from the work of St Petersburg s school of mathematical physics in the 1980s This book is an introduction to the theory of Yangians and twisted Yangians with a particular emphasis on the relationship with the classical matrix Lie algebras Hessian Polyhedra, Invariant Theory And Appell Hypergeometric Functions Lei Yang,2018-03-13 Our book gives the complex counterpart of Klein s classic book on the icosahedron We show that the following four apparently disjoint theories the symmetries of the Hessian polyhedra geometry the resolution of some system of algebraic equations algebra the system of partial differential equations of Appell hypergeometric functions analysis and the modular equation of Picard modular functions arithmetic are in fact dominated by the structure of a single object the Hessian group $\mathfrak{G}_{216}$ It provides another beautiful example on the fundamental unity of mathematics
