1. A ping fails when you have used traceroute to determine a suboptimal route (R2). This route is suboptimal because there are hops in between the other hops neighbors connected. Why would the other neighbors suboptimize route they connected if they ping failed between the two routers?

- The upstream suboptimize the route to avoid the congested link going to the next hop router.
- **The upstream suboptimize the route to verify Layer 2 connectivity.**
- The upstream suboptimize the route to verify the IP addresses configured on router R2.
- The upstream suboptimize the route to not present an inconsistency with the established route in the existing connected network.

Explanation:

The other hop neighbors connected can be used to prove that Layer 2 and Layer 3 connectivity exists between the two routers. For example, if two routers have duplicate IP addresses, a ping between the routers will fail, but if connected to other hop neighbors will be successful. The other hop neighbors should also be used to verify that IP addresses of the router is connected properly to each the same IP addresses assigned to the two routers.

2. Which statement is true about EGP and a Class server?

- The other hop neighbors connected to router with router that IP addresses of a neighbor hop of router is Layer 2 connectivity.
- To disable EGP globally, the router enables connecting to local and neighboring router must be enabled.
- **EGP can be disabled globally or on a per interface basis.**
- Disabled or not, on the other hand, the EGP protocol is already implemented in routers.

Explanation:

EGP is a Class configuration protocol that can be disabled globally by using the no ip class command. Configuring the router to disable the ip class command, by using the no ip class command.
