Ruaha Unirvesity Applicatio Form 2015 2016:

Handbook of Research on Current Trends in Cybersecurity and Educational Technology Jimenez, Remberto, O'Neill, Veronica E., 2023-02-17 There has been an increased use of technology in educational settings since the start of the COVID 19 pandemic. Despite the benefits of including such technologies to support education, there is still the need for vigilance to counter the inherent risk that comes with the use of such technologies as the protection of students and their information is paramount to the effective deployment of any technology in education. The Handbook of Research on Current Trends in Cybersecurity and Educational Technology explores the full spectrum of cybersecurity and educational technology today and brings awareness to the recent developments and use cases for emergent educational technology. Covering key topics such as artificial intelligence, gamification, robotics, and online learning, this premier reference source is ideal for computer scientists, industry professionals, policymakers, administrators, researchers, academicians, scholars, practitioners, instructors, and students.

Indigenous Methodologies, Research and Practices for Sustainable Development Marcellus F. Mbah, Walter Leal Filho, Sandra Ajaps, 2022-10-21 This book states that whilst academic research has long been grounded on the idea of western or scientific epistemologies, this often does not capture the uniqueness of Indigenous contexts and particularly as it relates to the achievement of the United Nations Sustainable Development Goals (SDGs). The SDGs were announced in 2015, accompanied by 17 goals and 169 targets. These goals are the means through which Agenda 2030 for sustainable development is to be pursued and realised over the next 15 years, and the contributions of Indigenous peoples are essential to achieving these goals. Indigenous peoples can be found in practically every region of the world, living on ancestral homelands in major cities, rainforests, mountain regions, desert plains, the Arctic, and small Pacific Islands. Their languages, knowledges, and values are rooted in the landscapes and natural resources within their territories. However, many Indigenous peoples are now minorities within their homelands and globally, and there is a dearth of research based on Indigenous epistemologies and methodologies. Furthermore, academic research on Indigenous peoples is typically based on western lenses. Thus, the paucity of Indigenous methodologies within mainstream research discourses presents challenges for implementing practical research designs and interpretations that can address epistemological distinctiveness within Indigenous communities. There is therefore the need to articulate as well as bring to the nexus of research aimed at fostering sustainable development a decolonising perspective in research design and practice. This is what this book wants to achieve. The contributions critically reflect on Indigenous approaches to research design and implementation towards achieving the sustainable development goals, as well as the associated challenges and opportunities. The contributions also advanced knowledge theory and practice of Indigenous methodologies for sustainable development.

Remote Sensing of Soil and Land Surface Processes Assefa Melesse, Omid Rahmati, Khabat Khsoravi, 2023-10-31 Remote Sensing of Soil and Land Surface Processes Monitoring Mapping and Modeling couples artificial intelligence and remote sensing for mapping and modeling natural resources thus

expanding the applicability of AI and machine learning for soils and landscape studies and providing a hybridized approach that also increases the accuracy of image analysis The book covers topics including digital soil mapping satellite land surface imagery assessment of land degradation and deep learning networks and their applicability to land surface processes and natural hazards including case studies and real life examples where appropriate This book offers postgraduates researchers and academics the latest techniques in remote sensing and geoinformation technologies to monitor soil and surface processes Introduces object based concepts and applications enhancing monitoring capabilities and increasing the accuracy of mapping Couples artificial intelligence and remote sensing for mapping and modeling natural resources expanding the applicability of AI and machine learning for soils and sediment studies Includes the use of new sensors and their applications to soils and sediment characterization Includes case studies from a variety of geographical areas

Nature Conservation in Southern Africa, 2018-11-26 Nature conservation in southern Africa has always been characterised by an interplay between Capital specific understandings of Morality and forms of Militarism that are all dependent upon the shared subservience and marginalization of animals and certain groups of people in society Although the subjectivity of people has been rendered visible in earlier publications on histories of conservation in southern Africa the subjectivity of animals is hardly ever seriously considered or explicitly dealt with In this edited volume the subjectivity and sentience of animals is explicitly included The contributors argue that the shared human and animal marginalisation and agency in nature conservation in southern Africa and beyond could and should be further explored under the label of sentient conservation Contributors are Malcolm Draper Vupenyu Dzingirai Jan Bart Gewald Michael Glover Paul Hebinck Tariro Kamuti Lindiwe Mangwanya Albert Manhamo Dhoya Snijders Marja Spierenburg Sandra Swart Harry Wels

the most fundamental research questions confronting the field today This diverse and thought provoking collection of essays spans virtually all of the key subfields of the discipline from behavioral and evolutionary ecology to population biology community ecology ecosystem ecology disease ecology and conservation biology These essays are intended to stoke curiosity challenge prevailing wisdom and provoke new ways of thinking about ecology in light of new technologies and unprecedented environmental challenges brought on by climate and land use change Authoritative and accessible *Unsolved Problems in Ecology* is ideal for graduate students in the early stages of their scientific careers and an essential resource for seasoned ecologists looking for exciting new directions to take their research Sheds light on modern ecology s most important and compelling open questions Features thought provoking contributions from more than two dozen world class ecologists Covers behavior evolution communities ecosystems resource management and more Discusses ways to raise the financial and intellectual profile of the discipline An invaluable resource for graduate students as well as seasoned ecologists

Ecology and Management of the African Buffalo Alexandre Caron, Daniel Cornélis, Philippe Chardonnet, Herbert H. T. Prins, 2023-11-23 One of iconic Africa s Big Five the African buffalo is the largest African bovine or antelope that occurs throughout most of sub Sahara and in a wide range of ecosystems from savanna to rainforest The African buffalo is also one of the most successful large African mammals in terms of abundance and biomass This species thus represents a powerful model to enhance our understanding of African biogeography and wildlife conservation ecology and management Edited by four researchers experienced in different aspects of the African buffalo s biology this volume provides an exhaustive compilation of knowledge on an emblematic species that stands out as an important component of African natural and human ecosystems It delivers a global view of the African buffalo and all known aspects of its ecology and management This book will appeal to students scholars scientists and wildlife managers as well as those enthusiastic about the charismatic species This title is also available as Open Access on Cambridge Core [Biodiversity across Afrotropical Environments](#) David Horák, Vincent Ralph Clark, Kevin Y. Njabo, Jon Fjeldså, Vincent Deblauwe, 2023-02-13 *Multicriteria Analysis for Environmental Decision-Making* Davide Geneletti, 2019-05-30 Multicriteria analysis or MCA has been increasingly used in environmental decision making to support the identification of suitable courses of action by integrating factual information with value based information collected through stakeholder engagement Multicriteria Analysis for Environmental Decision Making provides an introduction to the key concepts of MCA and includes a series of case studies that illustrate the application of MCA to a variety of environmental decision making problems ranging from protected area zoning to landfill siting and from forest restoration to environmental impact assessment of tourism infrastructures A compact reference that can be used by researchers practitioners and planners decision makers Multicriteria Analysis for Environmental Decision Making can also serve as a textbook for undergraduate and postgraduate courses in a broad range of curricula [Global Resource Scarcity](#) Marcelle C. Dawson, Christopher Rosin, Nave Wald, 2017-11-02 A common perception of global resource

scarcity holds that it is inevitably a catalyst for conflict among nations yet paradoxically incidents of such scarcity underlie some of the most important examples of international cooperation This volume examines the wider potential for the experience of scarcity to promote cooperation in international relations and diplomacy beyond the traditional bounds of the interests of competitive nation states The interdisciplinary background of the book s contributors shifts the focus of the analysis beyond narrow theoretical treatments of international relations and resource diplomacy to broader examinations of the practicalities of cooperation in the context of competition and scarcity Combining the insights of a range of social scientists with those of experts in the natural and bio sciences many of whom work as resource practitioners outside the context of universities the book works through the tensions between thinking theory and doing practice which so often plague the process of social change These encounters with scarcity draw attention away from the myopic focus on market forces and allocation and encourage us to recognise more fully the social nature of the tensions and opportunities that are associated with our shared dependence on resources that are not readily accessible to all The book brings together experts on theorising scarcity and those on the scarcity of specific resources It begins with a theoretical reframing of both the contested concept of scarcity and the underlying dynamics of resource diplomacy The authors then outline the current tensions around resource scarcity or degradation and examine existing progress towards cooperative international management of resources These include food and water scarcity mineral exploration and exploitation of the oceans Overall the contributors propose a more hopeful and positive engagement among the world s nations as they pursue the economic and social benefits derived from natural resources while maintaining the ecological processes on which they depend

The Biology of African Savannahs Bryan Shorrocks, William Bates, 2015 Savannah habitats comprise an ecologically important but ultimately fragile ecosystem They constitute one of the largest biomes on Earth covering almost 20% of the land surface and can be simply described as tropical and subtropical grasslands with scattered bushes and trees Most savannahs occur in Africa although smaller areas can be found in South America India and Australia They form a rich mosaic of diverse ecosystems and this book offers a concise but comprehensive introduction to their ecology biodiversity and conservation The Biology of African Savannahs describes the major plants grasses and trees such as Acacia and animals mainly large mammals that live in this habitat and examines the biological and ecological factors that influence their population size interactions such as predation and community composition Conservation issues such as climate change hunting and conflict between wildlife and domestic animals are also discussed This new edition has been updated throughout with the latest research in the field and contains new technique boxes which introduce readers to some of the analytical methods used to study African savannahs This accessible text is suitable for both senior undergraduate and graduate students taking courses in savannah and tropical ecology as part of a wider ecology and or conservation biology degree programme It will also be of relevance and use to the many professional ecologists and conservation practitioners requiring a concise but authoritative overview of
