Process Costing

Solutions to Questions

4-1 A process costing system should be used in situations where a homogeneous product is produced on a continuous basis in large quantities.

4-2 Job-order and processing costing are similar in the following ways:

1. Job-order costing and process costing have the same basic purposes—to assign materials, labor, and overhead cost to products and to provide a mechanism for computing unit product costs.
2. Both systems use the same basic manufacturing accounts.
3. Costs flow through the accounts in basically the same way in both systems.

4-3 Cost accumulation is simpler under process costing because costs only need to be assigned to departments—not individual jobs. A company usually has a small number of processing departments, whereas a job-order costing system often must keep track of the costs of hundreds or even thousands of jobs.

4-4 In a process costing system, a Work in Process account is maintained for each processing department.

4-5 The journal entry to record the transfer of work in process from the Mixing Department to the Firing Department is:

Work in Process, Firing.....	XXXX
Work in Process, Mixing.....	XXXX

4-6 The costs that might be added in the Firing Department include: (1) costs transferred in from the Mixing Department; (2) materials costs added in the Firing Department; (3) labor costs added in the Firing Department; and (4) overhead costs added in the Firing Department.

4-7 Under the weighted-average method, equivalent units of production consist of units transferred to the next department (or to finished goods) during the period plus the equivalent units in the department's ending work in process inventory.

4-8 The company will want to distinguish between the costs of the metals used to make the medallions, but the medals are otherwise identical and go through the same production processes. Thus, operation costing is ideally suited for the company's needs.

Raiborn, Stephanie F. Watson, 2003 This book provides the basics of both financial and managerial accounting Financial accounting provides primarily monetary information about business activities that result in the financial statements that are published for use by people outside the business Managerial accounting provides monetary and nonmonetary information about business activities that result in supporting details for the financial statements or that provide information for internal organizational users to plan control or make decisions about operations It is not intended to be a comprehensive volume in either financial or managerial accounting but an introduction for non business majors The book takes a user orientation steering clear of detailed technical discussions Many interesting examples from the travel industry are integrated throughout to catch the reader's interest and to apply concepts to companies they may know
