Real-time Iterative Learning Control Jian-Xin Xu, Sanjib K. Panda, Tong Heng Lee, 2008-12-12

Real time Iterative Learning Control demonstrates how the latest advances in iterative learning control (ILC) can be applied to a number of plants widely encountered in practice. The book gives a systematic introduction to real time ILC design and source of illustrative case studies for ILC problem solving. The fundamental concepts, schematics, configurations and generic guidelines for ILC design and implementation are enhanced by a well selected group of representative simple and easy to learn example applications. Key issues in ILC design and implementation in linear and nonlinear plants pervading mechatronics and batch processes are addressed in particular. ILC design in the continuous and discrete time domains, design in the frequency and time domains, design with problem specific performance objectives including robustness and optimality, design in a modular approach by integration with other control techniques and design by means of classical tools based on Bode plots and state space.
