

2. Organize stock in a way that works for your business

Traditionally, warehouses organize their stock in bin locations based on product line, for example, all produce, all dairy, and all dry ingredients. From a layout perspective, this does not allow for ease of access, as it requires employees to spend more time walking around the warehouse fulfilling orders.

Suggestions:

- Items with the same purchase frequency should be grouped in the same bin location - saving your employees the time and effort of collecting the product from various locations of the warehouse
- Your fastest moving stock should be stored closest to your shipping, staging and receiving areas of your plant - this will allow for minimal transfer time
- Your slowest moving stock should be stored furthest from shipping area or on the higher shelves - therefore picking activity is minimized

3. Accurately record all material transactions

Lost inventory is a major challenge for most manufacturers and distributors because managers cannot keep track of what moves in and out of the premises.

Developing and maintaining an inventory-related policies and procedures manual can reduce the rate of inventory inaccuracies.

How to create and maintain an inventory policies and procedures manual:

To begin your inventory policies and procedures manual:

- 1) Create a list of inventory-related transactions, such as normal/unexpected stock receipts, requisitions, sales, write-off stock and returns on goods
- 2) Develop a step-by-step guide on how material transactions will be recorded, usually with a combination of a computer system and manual submission, such as, hanging a clipboard at every exit of the building to serve as a reminder for employees to record any inventory movement
- 3) Once the policies are in place, it is everyone's responsibility to ensure that material transactions are recorded at all the times
- 4) Creating these policies should be a collaborative effort amongst everyone involved in the inventory process - to ensure nothing is left unaccounted for and everyone has "bought into" the procedures

that certification to the standard is sought to support achievement of company objectives and not the reverse and of course the standard can apply to organizations and services just as much as to companies Thus the word company in the text should be treated accordingly Illustrative material has been presented under the logo of a fictitious company Quality Food Services in this context QFS does not bear any relationship whatsoever to any identically or similarly named business that may exist Readers will find it helpful to read the book with a copy of the standard to hand and are strongly encouraged to read the complete text before taking any steps to prepare for certification to the standard
