

The background of the cover is an abstract composition of overlapping, curved, and straight lines in various shades of purple and blue. The lines create a sense of depth and movement, resembling architectural elements or perhaps stylized geographical features like roads or waterways. The overall color palette is monochromatic, with different tones of purple and blue creating contrast and texture.

Forces of Nature Barry A. Vann, 2012-03-20 As long as the human species has existed men and women have had to contend with the unpredictable forces of nature Geographer Barry A Vann brings a unique perspective to this age old struggle in this illuminating overview of human population shifts and their precarious relationship with climate change and geography Vann takes us on a journey along the migration routes of the earliest modern humans and tells why our ancestors chose to settle down in places that can be best described as natural utopias In the religiously oriented worldview of ancient peoples such places took on a sacred aura of divine favor Similarly destructive events such as volcanic eruptions and earthquakes were interpreted as expressions of divine wrath Vann shows how the ancient texts of the Bible and the Qur'an offer glimpses of past climates that were distinctly different from the climate of our time He also discusses the rise of technology as a means of controlling the threatening features of the natural world Though technology has enabled humanity to cope with hostile climates it has also created a false sense of security Vann notes that population clusters are increasing in dangerous areas and that no technology can protect vulnerable groups from major category hurricanes tornadoes or earthquakes Finally he considers our current anxieties regarding global warming pointing out that this focus has obscured a good deal of historical and geological evidence for a return of another ice age The Forces of Nature offers a challenging perspective on the precarious balance between fragile human communities and their often threatening environments

The Geography of the World Economy Paul Knox, John Agnew, Linda McCarthy, 2014-04-17 The Geography of the World Economy provides an in depth and stimulating introduction to the globalization of the world economy The book offers a consideration of local regional national and global economic development over the long historical term The theory and practice of economic and political geography provide a basis for understanding the interactions within and among the developed and developing countries of the world Illustrated in color throughout this new edition has been completely reworked and updated to take account of recent significant changes in the world economy A new companion website also accompanies the book with additional resources for each chapter including multiple choice and short essay questions and links to relevant websites Figures and tables are also available for download located at www.routledge.com/cw/knox The text is signposted throughout with a glossary of key terms and is richly illustrated with full color maps diagrams and illustrations It is ideal for upper level university undergraduates and for post graduates in a variety of specializations including geography economics political science international relations and global studies

Social Work and the Environment Michael Kim Zapf, 2009 This groundbreaking new work provides a detailed and extensive comparison of how the physical environment has been conceptualized in social work and other professions and offers a new and attractive foundational metaphor for social work The author acknowledges the need for greater awareness and action regarding environmental impacts and the book promotes more comprehensive notions of responsibility identity and stewardship that lead to a dynamic metaphor of people as place as the foundation for relevant social work practice in the early 21st century Why is that a profession with a declared focus on person in environment has been so silent on the environmental crisis Mainstream social work theory has narrowed the understanding of environment to include merely the social environment but this approach is no longer sufficient for participation in multi disciplinary efforts to tackle urgent environmental issues Transformative notions of responsibility identity and stewardship have been developed on the fringes of our professional community rural remote social workers Aboriginal social workers and international and spiritual social workers They must now move to the core of the profession
