It explores relationships between parenting practices and the development of eating behaviors in children, highlighting the importance of family mealtimes in healthful eating. The volume provides an overview of efforts to prevent or reduce obesity in children, with attention to minority populations and discusses research findings on targets for obesity prevention, including a focus on fathers as change agents who play a crucial yet understudied role in food parenting. The book acknowledges that with the current obesogenic environment in the United States and elsewhere around the world, additional and innovative efforts are needed to foster healthful eating behavior and orientations toward food in childhood and in families. For children and youth, summertime presents a unique break from the traditional structure, resources, and support systems that exist during the school year. For some students, this time involves opportunities to engage in fun and enriching activities and

programs while others face additional challenges as they lose a variety of supports including healthy meals medical care supervision and structured programs that enhance development Children that are limited by their social economic or physical environments during the summer months are at higher risk for worse academic health social and emotional and safety outcomes In contrast structured summertime activities and programs support basic developmental needs and positive outcomes for children and youth who can access and afford these programs These discrepancies in summertime experiences exacerbate pre existing academic inequities While further research is needed regarding the impact of summertime on developmental domains outside of the academic setting extensive literature exists regarding the impact of summertime on academic development trajectories However this knowledge is not sufficiently applied to policy and practice and it is important to address these inequalities

Shaping Summertime Experiences examines the impact of summertime experiences on the developmental trajectories of school age children and youth across four areas of well being including academic learning social and emotional development physical and mental health and health promoting and safety behaviors It also reviews the state of science and available literature regarding the impact of summertime experiences In addition this report provides recommendations to improve the experiences of children over the summertime regarding planning access and equity and opportunities for further research and data collection
