web a translation by a nonzero vector is not a linear map because linear maps must send the zero vector to the zero vector

however translations are very useful in performing coordinate transformations i ll introduce the following terminology for the composite of a linear transformation and a translation definition let  $A$  be a real matrix

web any vector  $v$  represented in  $B$  can be transformed to a representation in  $C$  as follows under the transformation of basis notice that the superscript on the transformation matrix  $M$  and the subscript on the coordinate vector  $v$  are the same and seemingly cancel leaving the remaining subscript
