ABSTRACT

Risk management is an activity, which integrates recognition of risk, risk assessment, developing strategies to manage it, and mitigation of risk using managerial resources. Some traditional risk managements are focused on risks stemming from physical or legal causes. (For example, natural disasters or fires, accidents, death). It may refer to numerous types of threats caused by environment, technology, humans, organizations and politics. Objective of risk management is identifying the risks and finding solution to reduce them. The paper describes the different steps in risk management process which methods are used in the different steps [Reference 2].

INTRODUCTION

Risk management is one part in information security. All managers are expected to play a role in the risk management process, but information security managers are expected to play the largest roles. Before studying risk management detail we should have some idea on risks and difference between hazard and risks. Hazard is any source of potential damage, harm or adverse health effects on something or someone under certain conditions at work. Basically hazard can cause harm or adverse effects. Risk is the chance of probability that a person will be harmed or experiences an adverse effect if exposed to a hazard.

Risk management is a process of identifying, analyzing, treating and monitoring the risks involved in any activity or process. This process is an expected responsibility for managers in all organizations. Risk management is carried out by mainly two components risk identification, risk control [Reference 1]. Risk identification: It is the process of identifying and documenting the risks. Following steps carries it out.

Risk assessment

Inventorizing assets Classifying assets Identifying threats and vulnerabilities Risk control: It is the process of applying controls to reduce the risks to an organization's data and information systems. This process carries out the following steps. Selecting strategy Justifying controls. Risk identification

A risk management strategy calls on information security professionals to identify, classify and prioritize the organization's information assets. Once that has been done, the threat identification process begins. Each information asset is examined to identify vulnerabilities, and when vulnerabilities are found, controls are identified and assed regarding their capability to limit possible losses should an attack occur. Asset identification and value assessment

The iterative process of identifying assets and assessing their value begins with the identification of the elements of an organization's systems, people, procedures, data/information, software, hardware, and networks.

Classifying assets

In addition to the identifying assets, it is advisable to classify them with respect to their security needs. For example, data could be classified as confidential data, internal data, and public data. No matter how an organization chooses to classify the components of its system, the components must be specific enough to allow the creation of various priority levels. The components then can be ranked according to criteria established by the categorization. The categories themselves should be comprehensive and mutually exclusive. Comprehensive means that all the information assets should fit in the list somewhere; Mutually exclusive means that each information asset should...

Enterprise Risk Management Mirna Jabbour, Jason Crawford, 2024-12-02 ERM is considered a dynamic capability that is critical to companies success from strategic and performance perspectives and is increasingly implemented in response to growing pressure from external stakeholders to enact and add legitimacy to existing management control systems However implementing ERM is a challenging process where success is dependent on balancing technical and social factors This book explores the challenges of implementing ERM from technical cognitive and social perspectives to enhance the organisation s capacity to generate and integrate information and knowledge about risk and uncertainty In existing publications ERM implementation is mainly viewed from technical or educational perspectives and treated as formal technical linear processes This book takes a different stance by recognising that implementation depends on formal and informal mechanisms that require a balanced combination of technical and social approaches It changes the paradigm to demonstrate that the

implementation of ERM is not a linear process that is similar across industries and organisations but relies on multiple dependencies such as leadership corporate governance and the culture of the organisation This book will be a valuable resource for scholars as well as upper level students across disciplines related to risk management including accounting and finance business and management leadership and organisational studies *Contemporary Challenges in Risk Management* T. Andersen,Stanley Mayes,2014-12-02 This book focuses on two central aspects of the risk managing process namely 1 how managers can and do assess developments in the external risk environment and deal with them and 2 analysing the effects of risk management and different managerial approaches The articles represent state of the art academic analyses and research contributions **Progress in Landslide Research and Technology, Volume 2 Issue 2, 2023** Irasema Alcántara-Ayala,Željko Arbanas,David Huntley,Kazuo Konagai,Snježana Mihalić Arbanas,Matjaž Mikoš,Maneesha V. Ramesh,Kyoji Sassa,Shinji Sassa,Huiming Tang,Binod Tiwari,2023-12-28 This open access book provides an overview of the progress in landslide research and technology and is part of a book series of the International Consortium on Landslides ICL The book provides a common platform for the publication of recent progress in landslide research and technology for practical applications and the benefit for the society contributing to the Kyoto Landslide Commitment 2020 which is expected to continue up to 2030 and even beyond to globally promote the understanding and reduction of landslide disaster risk as well as to address the 2030 Agenda Sustainable Development Goals **WHO guidance on research methods for health emergency and disaster risk management, revised 2022** World Health Organization,2022-10-13 The WHO website has an introductory description for the Guidance It states that the WHO Guidance on Research Methods for Health Emergency and Disaster Risk Management Health EDRM was developed to address the need to promote high quality research methods to those who commission and conduct research on Health EDRM The intended audience includes decision makers practitioners and community actors who need for evidence based policy and practice to implement the Health EDRM Framework Sendai Framework on Disaster Risk Reduction 2015 2030 the International Health Regulations 2005 the United Nations Sustainable Development Goals SDGs and other relevant global regional and national frameworks Chapters have been written by more than 100 international authors with practical experience and expertise in a wide range of areas including research practice and policy making The unique collection of chapters provides straightforward and practical guidance on how to plan conduct and report a wide variety of studies that can answer quantitative and qualitative questions in different emergency settings Case studies of direct relevance to Health EDRM provide real life examples of research to illustrate the methods and their impact The book was revised in 2022 with an additional chapter on how to use this book in the context of COVID 19 pandemic Flood Risk Science and Management Gareth Pender,Hazel Faulkner,2010-12-01 Approaches to avoid loss of life and limit disruption and damage from flooding have changed significantly in recent years Worldwide there has been a move from a strategy of flood defence to one of flood risk management Flood risk management

includes flood prevention using hard defences where appropriate but also requires that society learns to live with floods and that stakeholders living in flood prone areas develop coping strategies to increase their resilience to flood impacts when these occur This change in approach represents a paradigm shift which stems from the realisation that continuing to strengthen and extend conventional flood defences is unsustainable economically environmentally and in terms of social equity Flood risk management recognises that a sustainable approach must rest on integrated measures that reduce not only the probability of flooding but also the consequences This is essential as increases in the probability of inundation are inevitable in many areas of the world due to climate change while socio economic development will lead to spiralling increases in the consequences of flooding unless land use in floodplains is carefully planned Flood Risk Science and Management provides an extensive and comprehensive synthesis of current research in flood management providing a multi disciplinary reference text covering a wide range of flood management topics Its targeted readership is the international research community from research students through to senior staff and flood management professionals such as engineers planners government officials and those with flood management responsibility in the public sector By using the concept of case study chapters international coverage is given to the topic ensuring a world wide relevance **Digital**
