Nucleic Acids and Proteins in Plants I D. Boulter,2012-12-06 D BOULTER and B PARTHIER At the time of the former edition of the Encyclopedia of Plant Physiology approximately 25 years ago no complete plant protein amino acid sequences or nucleic acid sequences had been determined Although the structure of DNA and its function as the genetic material had just been reported little detail was known of the mechanism of its action and D G CATCHSIDE was to write in the first chapter of the first volume of the Encyclopedia There is a considerable body of evidence that the gene acts as a unit of physiological action through the control of individual enzymes No cell free transcription and protein synthesizing systems were available and the whole range of powerful methods of recombinant DNA technology was still to be developed Today for the first time with plant systems it is possible not only to describe their molecular biology but also to manipulate it i e to move from a description to a technological phase The properties of living systems are inscribed by those of the proteins and nucleic acids which they synthesize Proteins due to their very large size occur as macromolecules in colloidal solution or associated in supra molecular colloidal form The colloidal state confers low thermal conductivity low diffusion coefficients and high viscosity properties which buffer a biological system from the effects of a changing environment Biological systems not only have great stability but also the capacity to reproduce **Structure and Function of Genetic Elements**
