## Investment Management

- 4. Do not place the apparatus in an area of circulation or head heights, otherwise it is dangerous to the user.
- 5. Do not place the apparatus in a location where the user can be struck by the apparatus or where the apparatus could be struck by the user.
- 6. Do not place the apparatus in a location where the user can be struck by the apparatus or where the apparatus could be struck by the user.
- 7. Do not place the apparatus in a location where the user can be struck by the apparatus or where the apparatus could be struck by the user.
- 8. Do not place the apparatus in a location where the user can be struck by the apparatus or where the apparatus could be struck by the user.
- 9. Do not place the apparatus in a location where the user can be struck by the apparatus or where the apparatus could be struck by the user.
- 10. Do not place the apparatus in a location where the user can be struck by the apparatus or where the apparatus could be struck by the user.

**Abstract**—The purpose of this study was to determine the effect of a 10-week, 1000 kcal energy deficit diet on the body composition and physical fitness of obese women. The study was a randomized, controlled trial. The subjects were 20 obese women who were randomly assigned to either a diet or an exercise group. The diet group was instructed to consume 1000 kcal less than their maintenance level, while the exercise group was instructed to exercise for 30 minutes, 3 times per week. The study was conducted over a 10-week period. The results showed that the diet group lost significantly more weight and body fat than the exercise group. The exercise group showed no significant changes in body composition or physical fitness. The study concluded that a 1000 kcal energy deficit diet is an effective method for weight loss and body composition improvement in obese women.

If gross revenues are  $T$  (in pounds), then the contribution margin (ignoring tax and depreciation) is  $T - \text{fixed costs}$ . If the contribution margin is  $C$  (in £), then the contribution margin ratio is  $C/T$  (in %).

- Day and night periods that are longer than the standard 24 hours occur most commonly with the use of artificial light in commercial greenhouses. Likewise, plants are flowering the opposite way (e.g., in the middle of the night).
- Increased moisture in the soil will compete with the salt for absorption by the roots. Therefore, the length of the growing phase may be extended by the soil moisture available.
- The soil pH can also be important. It may change the degree the plant is able to absorb the growing medium's nutrients. Soil pH is not suitable for these plants if it is too acidic. However, some plants can tolerate the pH range of a soil.
