Invisible Fields José Luis de Vicente, Honor Harger, Josep Perelló, 2011 With the invention of telecommunications technologies in the late nineteenth century the radio electric spectrum became a tool for rethinking the world in which we live The emission of radio waves did away with physical distances crossing borders and cultures and acting as a powerful catalyst for trade Moreover the radio spectrum is the invisible infrastructure on which our information and communication technologies have been built The history of its scientific discovery and how it was gradually colonized by the media the military complex and activists and hackers is one of the most fascinating stories of the twentieth century The future uses of the radio electric spectrum in the twenty first century and its new potential are being decided now with the end of analogue TV broadcasting worldwide marking the most important transformation of uses in the radio electric space in decades This catalog sets out to examine these issues and shed a little light on the most intriguing stories about the radio electric spectrum

The Method of Equality Jacques Rancière, 2016-06-07 The development of Rancière's philosophical work from his formative years through the political and methodological break with Louis Althusser and the lessons of May 68 is documented here as are the confrontations with other thinkers the controversies and occasional misunderstandings So too are the unity of his work and the distinctive style of his thinking despite the frequent disconnect between politics and aesthetics and the subterranean movement between categories and works Lastly one sees his view of our age and of our age's many different and competing realities What we gain in the end is a rich and multi layered portrait of a life and a body of thought dedicated to the exercise of philosophy and to the emergence of possible new worlds *Athenaeum and Literary Chronicle*, 1860

The Strange Loops of Translation Douglas Robinson, 2021-12-16 One of the most exciting theories to emerge from cognitive

science research over the past few decades has been Douglas Hofstadter's notion of strange loops from G del Escher Bach 1979 Hofstadter is also an active literary translator who has written about translation perhaps most notably in his 1997 book *Le Ton Beau de Marot* where he draws on his cognitive science research And yet he has never considered the possibility that translation might itself be a strange loop In this book Douglas Robinson puts Hofstadter's strange loops theory into dialogue with a series of definitive theories of translation in the process showing just how cognitively and affectively complex an activity translation actually is

The Boston Medical and Surgical Journal, 1902 **How Language Informs Mathematics** Dirk Damsma, 2019-11-11 In How Language Informs Mathematics Dirk Damsma shows how Hegel's and Marx's systematic dialectical analysis of mathematical and economic language helps us understand the structure and nature of mathematical and capitalist systems More importantly Damsma shows how knowledge of the latter can inform model assumptions and help improve models His book provides a blueprint for an approach to economic model building that does away with arbitrarily chosen assumptions and is sensitive to the institutional structures of capitalism In light of the failure of mainstream economics to understand systemic failures like the financial crisis and given the arbitrary character of most assumptions in mainstream models such an approach is desperately needed Catalogue of Books and Periodical Sets on French Canada, History of French Abbeys and Catholic Theology Martinus Nijhoff, 2013-11-21
