

U.S. Tire Manufacturer's Association

Repairs must be performed by removing the tire from the rim/wheel assembly to perform a complete inspection to assess all damage that may be present. Repairs are limited to the tread area only (see graphic).

Puncture injury cannot be greater than 1/4-inch (6mm) in diameter; DO NOT make repairs where the injury damage extends into the shoulder/belt edge area OR where the injury extends at an angle into the shoulder area. If there is any question that the injury extends into the shoulder/belt edge area, then the tire must be taken out of service.

Tire Industry Association

It is important that the tire technician remove the tire from the rim so that the inside can be thoroughly inspected. Many times, a simple object such as a nail in the tread can result in severe damage to the sidewall that cannot be seen on the outside of the tire. Therefore, on-the-wheel wheel repairs like string plugs are not recommended and must be considered temporary.

A plug by itself or a patch by itself is not an acceptable repair because the plug does not permanently seal the innerliner and the patch does not fill the void left by the penetrating object, which allows water to enter the body of the tire and starting corroding the steel belts.

Puncture repairs are limited to the center of the tread area. If there are punctures or damage in the shoulder or sidewall of the tire, it is not repairable.

Puncture repairs are limited to the center of the tread area. If there are punctures or damage in the shoulder or sidewall of the tire, it is not repairable.
