Abstract—The purpose of this study was to determine the effect of a 10-week training program on the heart rate (HR) and heart rate reserve (HRR) of sedentary middle-aged men. The subjects were randomly assigned to a control group (CG) and an exercise group (EG). The EG performed a 10-week training program consisting of 3 sessions per week of 30 min of aerobic exercise at 60% of their maximum heart rate. The CG did not exercise. The HR and HRR were measured at rest and during a 30-min submaximal exercise test at the beginning and at the end of the 10-week period. The EG showed a significant decrease in HR at rest and during exercise, and a significant increase in HRR at rest and during exercise, compared to the CG. The results suggest that a 10-week training program can improve the cardiovascular fitness of sedentary middle-aged men.

- Day and night periods that are longer than the standard 24 hours occur most commonly with the use of artificial light or other light sources. To avoid this, there are two things the producer should do:
 - Turn off the lights at the end of the work day.
 - If the lights are required, the length of the work day should be kept as short as possible.
- The end of the night period is the beginning of the day, so the longer the night period is, the longer the day period is. Therefore, the longer the night period is, the longer the day period is. This is why the night period should be kept as short as possible.

When you install your T-Value One Connection, improper installation of all four screws (50 combinations for One Connection) will void the warranty. Please, before installing, refer to the correct installation instructions. Failure to maintain proper ventilation may result in a variety of problems with the product.

- When a producer's price for the output rises or falls, it must adjust its output accordingly. For example, if the price of the output rises, the producer will want to produce more of the output. This is because the higher price makes it more profitable to produce. The producer will continue to increase output until the marginal cost of production equals the price of the output.
