

EXECUTIVE SUMMARY

CLIR was commissioned by the Alfred P. Sloan Foundation to complete a study of data curation practices among scholars at five institutions of higher education. We conducted ethnographic interviews with faculty, postdoctoral fellows, graduate students, and other researchers in a variety of social sciences disciplines. The goals of the study were to identify barriers to data curation, to recognize unmet researcher needs within the university environment, and to gain a holistic understanding of the workflows involved in the creation, management, and preservation of research data.

Key Findings

- None of the researchers interviewed for this study have received formal training in data management practices, nor do they express satisfaction with their level of expertise. Researchers are learning on the job in an ad hoc fashion.
- Few researchers, especially among those who are early in their career, think about long-term preservation of their data.
- The demands of publication output overwhelm long-term considerations of data curation. Metadata and documentation are of interest only if they help a researcher complete his or her work.
- There is a great need for more effective collaboration tools, as well as online spaces that support the volume of data generated and provide appropriate privacy and access controls.
- Few researchers are aware of the data services that the library might be able to provide and seem to regard the library as a

Windows Vista is Microsoft's most important software release in more than a decade. It offers users an abundance of new and upgraded features that were more than five years in the making: a gorgeous glass-like visual overhaul, superior searching and organization tools, a multimedia and collaboration suite, and above all, a massive top-to-bottom security shield overhaul. There's scarcely a single feature of the older versions of Windows that hasn't been tweaked, overhauled, or replaced entirely. But when users first encounter this beautiful new operating system, there's gonna be a whole lotta head scratchin' starting with trying to figure out which of the five versions of Vista is installed on the PC: Home, Premium, Business, Enterprise, Ultimate. Thankfully, *Windows Vista: The Missing Manual* offers coverage of all five versions. Like its predecessors, this book from New York Times columnist, bestselling author, and Missing Manuals creator David Pogue illuminates its subject with technical insight, plenty of wit, and hardnosed objectivity for beginners, veteran standalone PC users, and those who know their way around a network. Readers will learn how to navigate Vista's elegant new desktop, locate anything on your hard drive quickly with the fast, powerful, and fully integrated search function, use the Media Center to record TV and radio, present photos, play music, and record any of the above to DVD. Chat, videoconference, and surf the Web with the vastly improved Internet Explorer 7 tabbed browser. Build a network for file sharing, set up workgroups, and connect from the road. Protect your PC and network with Vista's beefed-up security. And much more. This jargon-free guide explains Vista's features clearly and thoroughly, revealing which work well and which don't. It's the book that should have been in the box. **Business Process**
