Intelligent Multimedia Communication: Techniques and Applications Chang Wen Chen, Zhu Li, Shiguo Lian, 2011-07-06

Multimedia data are used more and more widely in human being's life e.g. videoconferencing, visual telephone, IPTV etc. Nearly most of the applications need multimedia transmission techniques that send multimedia data from one side to another side and keep the properties of efficiency, robustness and security. Here the efficiency denotes the time cost of transmission operations, the robustness denotes the ability to survive transmission errors or noises, and the security denotes the protection of the transmitted media content. Recently various intelligent or innovative techniques are invented which bring vast performance improvements to practical applications. For example, such content transmission techniques as p2p, sensor network and ad hoc network are constructed which adaptively use the peers' properties to improve the network's resources. Multimedia adaptation techniques can adjust the multimedia data rate in order to be compliant with the network's bandwidth. Scalable encryption techniques can generate the data stream that can be correctly decrypted after bit rate conversion. Ubiquitous multimedia services make the user share any kind of content anywhere. The book includes fourteen chapters highlighting current concepts, issues and emerging technologies. Distinguished scholars from many prominent research institutions around the world contribute to the book. The book covers various aspects including not only some fundamental knowledge and the latest key techniques but also typical applications and open issues. For example, the covered topics include the present and future video coding standards, stereo and multiview coding techniques, free viewpoint TV techniques, wireless broadcasting techniques, media streaming techniques, wireless media transmission techniques and systems, and User Generated Content sharing.
