

## Fundamental Counting Principle & Probability Spring 2014 Answer Key

1. Many ice finally creamed have different choices for the flavor down to 4 flavors, 3 toppings and 2 pieces of cones. How many different sundaes could the make from these choices?

$$4 \times 3 \times 2 = 24 \text{ sundae}$$

2. The ice cream shop offers 5 flavors (Chocolate, Vanilla, Strawberry, Peppermint, and Rocky Road). You order a double-scoop cone. In how many different ways can the clerk put the ice cream on the cone if you wanted two different flavors? How many is repeated too. C-V would mean Chocolate on top of Vanilla, and V-C would mean Vanilla on top of Strawberry. If two scoops on top of Vanilla is not the same as Vanilla on top of Chocolate.

|   |   |   |   |   |
|---|---|---|---|---|
| C | V | S | P | R |
| V | C | S | P | R |
| S | C | V | P | R |
| P | C | V | S | R |
| R | C | V | S | P |

Another way to look at this is that there are 5 flavors to pick, and then there would be only four flavors left to pick, since you cannot repeat.

$$5 \times 4 = 20 \text{ ways}$$

3. A certain fast-foods 3 sizes of burgers (small, medium, and large) with 5 choices of toppings (no lettuce, lettuce, extra lettuce). There are five choices for sides: Fries, Root beer, Cheese, Apple, and Lemonade. How many possible meals can a kid of burgers with a side be purchased?

$$3 \times 5 \times 5 = 45 \text{ ways}$$

4. A state issues license plates consisting of letters and numbers. The alphabet has 26 letters (A...Z) and the letters may be repeated. There are 10 digits (0...9) and the digits may be repeated. How many possible license plates can be issued with two letters followed by three numbers?

$$\begin{array}{ccccc} \text{letter} & \text{letter} & \text{number} & \text{number} & \text{number} \\ 26 & 26 & 10 & 10 & 10 \end{array} \quad 26 \times 26 \times 10 \times 10 \times 10 = 676,000$$

5. A company places a 6-symbol code on each unit of product. The first symbol is always the number 5. The next three symbols are digits (0...9, with repeats allowed). The last two symbols of the code are always two letters, the first of which is NOT a vowel. How many different codes are possible?

|       |       |       |       |        |        |
|-------|-------|-------|-------|--------|--------|
| digit | digit | digit | digit | letter | letter |
|-------|-------|-------|-------|--------|--------|

Since the first symbol is always a 5, there is only one choice for that position.

Since A, E, I, O, and U are vowels, there are 21 non-vowels.

$$1 \times 10 \times 10 \times 10 \times 21 \times 26 = 546,000 \text{ different codes}$$

6. How many possible licenses can be ordered at Chipotle, assuming only one selection from each category?

| Type    | Meat  | Topping | Beverage | Sauce  | Side     | Shopping  |
|---------|-------|---------|----------|--------|----------|-----------|
| Regular | White | Chicken | Black    | Hot    | Beans    | Chips     |
| Small   | Beef  | Beef    | Beef     | Medium | Beanitos | Guacamole |
|         |       | Wiggle  |          | Hot    |          | Lettuce   |

$$2 \times 2 \times 4 \times 2 \times 2 \times 4 \times 4 = 512 \text{ possible licenses, assuming only one selection from each category.}$$

**Law, Economics, and Game Theory** John Cirace, 2020-07-06 This book considers three relationships law and economics economics and game theory and game theory and law Economists teach lawyers that economic principles cut across and integrate seemingly different legal subjects such as contracts torts and property Correspondingly lawyers teach economists that legal rationality is a separate and distinct decision making process that can be formalized by behavioral rules that are parallel to and comparable with the behavioral rules of economic rationality that efficiency often must be constrained by legal goals such as equal protection of the laws due process and horizontal and distributional equity and that the general case methodology of economics vs the hard case methodology of law for determining the truth or falsity of economic theories and theorems sometimes conflict Economics and Game Theory Law and economics books focus on economic analysis of judges decisions in common law cases and have been mostly limited to contracts torts property criminal law and suit and settlement There is usually no discussion of the many areas of law that require cooperative action such as is needed to provide economic infrastructure control public bad type externalities and make legislation Game theory provides the bridge between competitive markets and the missing discussion of cooperative action in law and economics How Competitive markets are examples subset of the Prisoners Dilemma which explains the conflict between individual self interested behavior and cooperation both in economic markets and in legislative bodies and demonstrates the need for social infrastructure and regulation of pollution and global warming Game Theory and Law Lawsuits usually involve litigation between two parties not the myriad participants in markets so the assumption of self interest constrained by markets does not carry over to legal disputes involving one on one bargaining in which the law gives one party superior bargaining power Game theory models predict the effect of different legal institutions rights and rules on the outcome of such bargaining Game theory also has a natural four model framework which is used in this book to analyze the law and economics of civil obligation which consists of torts negligence contracts and unjust enrichment
