Manual of Extracorporeal Membrane Oxygenation (ECMO) in the ICU Poonam Malhotra Kapoor, 2013-09-30

Extracorporeal Membrane Oxygenation ECMO is a procedure that uses a machine to take over the work of the lungs and sometimes the heart. The system provides heart lung bypass support using a pump to circulate blood through an artificial lung back into the bloodstream providing enough oxygen to the patient whilst allowing time for the lungs and heart to rest or heal during or after serious illness. ECMO is often used for babies but can also be used for children and adults. Medline Plus The techniques for ECMO require professionals from multidisciplinary background to be involved in the procedure. This practical manual is a comprehensive guide to ECMO. Divided into eleven sections, the book begins with an introduction to the procedure and equipment. The following sections provide step by step discussion on initiation, maintenance of support and monitoring and techniques of ECMO for different case scenarios. The final sections present multiple choice questions for self assessment and extensive appendices. Key points Comprehensive guide to Extracorporeal Membrane Oxygenation ECMO Highly relevant for intensivists, anaesthesiologists, surgeons, paediatricians and cardiologists. Includes section of multiple choice questions for self assessment. More than 186 full colour images and illustrations. **Extracorporeal life support**

ECLS has been recognized as one primary rescue strategy when the conventional treatments cannot reverse the process of cardiac dysfunction or respiratory dysfunction. During the recent years ECLS has also been utilized as the bridge during perioperative organ transplantation, emergency cardiopulmonary resuscitation and chronic assist devices such as left ventricular assist device. This book summarizes the major characteristics of technique, current status of implication and topics of development. Physiology and mechanism of ECLS is defined in the initial part of the book. Type and primary characteristics of ECLS including instrument materials and monitoring methods are further introduced. Methods of cannulation, characteristics of patients and key point of management during pediatric ECLS are included. ECLS has been recognized as one kind of novel CPR procedures. Transport of ECLS treatment of various complications with preventive strategy are demonstrated. Recent hot topics of ECLS and training perspective are also discussed.
