Biophysics of the Cell Surface Roland Glaser, David Gingell, 2013-03-07 It is common practice to publish conference papers in books or monograph series This gives some advantage to those who did not have the opportunity to attend the meetings but it irritates and disappoints others who may have hoped for a set of closely related reviews With this book we have tried to find a compromise It presents a selection from the topics which have been discussed in a series of international symposia entitled Biophysics of Cell Surface held in 1976 1978 1981 1985 and 1988 in the GDR and subsequently published in the journal STUDIA BIOPHYSICA volumes 56 74 90 110 1271 Nearly all the contributors to this book participated in one or more of the meetings We hope that our choice of topics selected for this book manages to reflect the variety and interest of the broad range of subjects which fall within the scope of membrane biophysics without taking on the randomness of a scientific car boot sale We would like to express our thanks to all colleagues and organisations who helped to realize the conferences and particularly this book financial support for the symposia of 1985 and 1988 was provided by the IUPAB A number of topics reflected in this book resulted in international cooperations supported by various organisations We are especially grateful for the support of UNESCO research project on biophysics in this respect The European Bureau ROSTE of UNESCO supported the editorial work of this book

Conjugate Gradient Algorithms and Finite Element Methods Michal Krizek, Pekka Neittaanmäki, Roland Glowinski, Sergey Korotov, 2012-12-06 The position taken in this collection of pedagogically written essays is that conjugate gradient algorithms and finite element methods complement each other extremely well Via their combinations practitioners have been able to solve complicated direct and inverse multidimensional problems modeled by ordinary or partial differential equations and inequalities not necessarily linear optimal control and optimal design being part of these problems The aim of this book is to present both methods in the context of complicated problems modeled by linear and nonlinear partial differential equations to provide an in depth discussion on their implementation aspects The authors show that conjugate gradient methods and finite element methods apply to the solution of real life problems They address graduate students as well as experts in scientific computing

Keyboard ,1998 *Neural Fields* Stephen Coombes,Peter beim Graben,Roland Potthast,James Wright,2014-06-17 Neural field theory has a long standing tradition in the mathematical and computational neurosciences Beginning almost 50 years ago with seminal work by Griffiths and culminating in the 1970ties with the models of Wilson and Cowan Nunez and

Amari this important research area experienced a renaissance during the 1990ties by the groups of Ermentrout Robinson Bressloff Wright and Haken Since then much progress has been made in both the development of mathematical and numerical techniques and in physiological refinement und understanding In contrast to large scale neural network models described by huge connectivity matrices that are computationally expensive in numerical simulations neural field models described by connectivity kernels allow for analytical treatment by means of methods from functional analysis Thus a number of rigorous results on the existence of bump and wave solutions or on inverse kernel construction problems are nowadays available Moreover neural fields provide an important interface for the coupling of neural activity to experimentally observable data such as the electroencephalogram EEG or functional magnetic resonance imaging fMRI And finally neural fields over rather abstract feature spaces also called dynamic fields found successful applications in the cognitive sciences and in robotics Up to now research results in neural field theory have been disseminated across a number of distinct journals from mathematics computational neuroscience biophysics cognitive science and others There is no comprehensive collection of results or reviews available yet With our proposed book Neural Field Theory we aim at filling this gap in the market We received consent from some of the leading scientists in the field who are willing to write contributions for the book among them are two of the founding fathers of neural field theory Shun ichi Amari and Jack Cowan

Variational Methods for the Numerical Solution of Nonlinear Elliptic Problem Roland Glowinski, 2015-11-04 Variational Methods for the Numerical Solution of Nonlinear Elliptic Problems addresses computational methods that have proven efficient for the solution of a large variety of nonlinear elliptic problems These methods can be applied to many problems in science and engineering but this book focuses on their application to problems in continuum mechanics and physics This book differs from others on the topic by presenting examples of the power and versatility of operator splitting methods providing a detailed introduction to alternating direction methods of multipliers and their applicability to the solution of nonlinear possibly nonsmooth problems from science and engineering and showing that nonlinear least squares methods combined with operator splitting and conjugate gradient algorithms provide efficient tools for the solution of highly nonlinear problems The book provides useful insights suitable for advanced graduate students faculty and researchers in applied and computational mathematics as well as research engineers mathematical physicists and systems engineers
